

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 36 background values. 25% NDs. Annual per-constituent alpha = 0.02674. Individual comparison alpha = 0.001354 (1 of 2). Comparing 10 points to limit.

Constituent: Boron Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Exceeds Limit: APMW-1R, APMW-2, APMW-3, APMW-4, APMW-5, APMW-6R, APMW-8, APMW-9

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 36 background values. Annual per-constituent alpha = 0.02674. Individual comparison alpha = 0.001354 (1 of 2). Comparing 10 points to limit.

Constituent: Calcium Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Exceeds Limit: APMW-3, APMW-5

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 36 background values. Annual per-constituent alpha = 0.02674. Individual comparison alpha = 0.001354 (1 of 2). Comparing 10 points to limit.

Constituent: Chloride Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Hollow symbols indicate censored values.

Within Limit

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 38 background values. 28.95% NDs. Annual per-constituent alpha = 0.02434. Individual comparison alpha = 0.001231 (1 of 2). Comparing 10 points to limit.

Constituent: Fluoride Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Exceeds Limits: APMW-10, APMW-9

Prediction Limit
Interwell Parametric

Background Data Summary: Mean=6.341, Std. Dev.=0.2214, n=37. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9711, critical = 0.914. Kappa = 2.081 (c=7, w=10, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.0003761. Comparing 10 points to limit.

Constituent: pH Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Within Limit

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 36 background values. 2.778% NDs. Annual per-constituent alpha = 0.02674. Individual comparison alpha = 0.001354 (1 of 2). Comparing 10 points to limit.

Constituent: Sulfate Analysis Run 5/3/2021 2:35 PM View: Appendix III
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Exceeds Limit: APMW-3, APMW-5

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 36 background values. Annual per-constituent alpha = 0.02674. Individual comparison alpha = 0.001354 (1 of 2). Comparing 10 points to limit.

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Antimony Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
 Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
 Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
 Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Barium Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
 Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Barium Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Beryllium Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Beryllium Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Cadmium Analysis Run 5/4/2021 6:34 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Chromium Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Cobalt Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Cobalt Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Combined Radium 226 + 228 Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Combined Radium 226 + 228 Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Fluoride Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Fluoride Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Lead Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Molybdenum Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Molybdenum Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Selenium Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Selenium Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Thallium Analysis Run 5/4/2021 6:35 PM View: Appendix IV - Confidence Intervals
Plant Watson Client: Southern Company Data: Plant Watson AP CCR

Outlier Summary

Outlier Summary

1.0 INTRODUCTION

This document presents an alternate source demonstration (ASD) for barium at the former Coal Combustion Residuals (CCR) Unit at Mississippi Power Company (Mississippi Power) Plant Jack Watson Electric Generating Plant (Plant Watson). This ASD has been prepared to meet the requirements of the United States Environmental Protection Agency's (USEPA's) CCR Rule 40 CFR Part 257.95(g)(3)(ii) which states that the owner or operator may:

Demonstrate that a source other than the CCR unit caused the contamination, or that the statistically significant increase resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. Any such demonstration must be supported by a report that includes the factual or evidentiary basis for any conclusions and must be certified to be accurate by a qualified professional engineer.

1.1 Background

Plant Watson is located in Harrison County, Mississippi near the City of Gulfport. The site is bordered by Interstate Highway 10 (I-10) to the north, Reichold Road and industrial land on the south, the tidally influenced Biloxi River on the east, and industrial land on the west (**Figure 1**). The former CCR Unit operated on 102-acres to support coal-fired electricity generation at Plant Watson until April 2015. Intake and discharge canals were installed to the north and west of the former CCR Unit, respectively, and saline water from the intake canal was used to sluice CCR into the former CCR Unit during coal-fired operations. In 2015, Plant Watson converted to a natural gas fired electricity generation process and the former CCR Unit was subsequently closed in May 2018.

In accordance with 40 CFR 257.91, a CCR groundwater monitoring system was installed at the boundary of the former CCR Unit at locations and depths to yield groundwater samples from the uppermost aquifer. Four distinct geologic units have been encountered at the site. Unit 1 is comprised of dike fill material and is underlain by Unit 2, a sandy clay aquitard. Unit 3 is the uppermost aquifer at the site and consists primarily of sand. The CCR monitoring well network is screened in Unit 3. Finally, Unit 4 is a clay aquitard with interbedded sands underlying Unit 3. The CCR monitoring well network was certified by a professional engineer (PE), and the certification was placed in the Operating Record. The locations of the CCR monitoring wells are shown on **Figure 2**.

Groundwater monitoring data collected during the semiannual monitoring events completed in August 2019 and March 2020 were statistically analyzed pursuant to 40 CFR 257.93(f) and using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities Unified Guidance* (Unified Guidance) (USEPA, 2009). Statistical analyses identified the following constituents at statistically significant levels (SSLs) above applicable groundwater protection standards (GWPSs):

- Arsenic: APMW-3, APMW-4, APMW-5, APMW-6R, APMW-8, and APMW-10;
- Barium: APMW-2;
- Combined Radium 226+228: APMW-1R, APMW-2, APMW-3, APMW-7, and APMW-9;
- Lithium: APMW-3, APMW-4, APMW-5, APMW-6R, and APMW-8; and
- Molybdenum: APMW-6R and APMW-8.

In accordance with 40 CFR 257.95(g), a notification identifying SSLs was prepared and placed in the Operating Record on January 13, 2020. Pursuant to 40 CFR 257.96, an assessment of corrective measures (ACM) was initiated on March 15, 2020.

1.2 Purpose

The purpose of this report is to demonstrate that:

- A naturally-occurring source of barium is present in the subsurface surrounding the former CCR Unit;
- A naturally-occurring source of barium caused the statistically elevated level (relative to background) of barium observed in groundwater downgradient of the former CCR Unit; and
- Porewater discharge from the former CCR Unit did not result in the elevated levels of barium observed in groundwater downgradient of the former CCR Unit.

2.0 ALTERNATE SOURCE DEMONSTRATION APPROACH

Mississippi Power identified an SSL of barium in monitoring well APMW-2 (**Figure 2**). This report demonstrates that a naturally-occurring source of barium caused the elevated level (relative to background) of barium observed in groundwater downgradient of the former CCR Unit, resulting in the SSL of barium.

2.1 Overview

The approach to the barium ASD for the former CCR Unit at Plant Watson relies on the following lines of evidence:

- Analysis of naturally-occurring barium in soils at the site;
- Analysis of barium in ash porewater and Unit 3 groundwater at the site;
- Analysis of the geochemical conditions at the site; and
- Analysis of barium in ash leachate at other CCR sites.

A brief description of the components of this ASD, including a description of field activities is presented below.

2.2 Analysis of Soils

Site soils were evaluated for naturally-occurring barium, which may include a mineral called barite (i.e., barium sulfate, the least soluble barium salt [API, 1995]) or other barium-containing minerals (e.g., mica or feldspar minerals). Elevated concentrations of barium throughout site soils, regardless of spatial proximity to the former CCR Unit would be indicative of naturally-occurring barium.

2.3 Statistical Comparison of Groundwater and Ash Porewater

A statistical comparison of barium concentrations in ash porewater relative to barium concentrations in Unit 3 groundwater was completed to evaluate ash porewater as a potential source of barium in APMW-2. If barium concentrations in ash porewater collected from the former CCR Unit are significantly lower than barium concentrations in Unit 3 groundwater, then the ash porewater is not considered to be a source for barium in Unit 3 groundwater.

2.4 Analysis of the Geochemical Conditions at the Site

An evaluation of the geochemical conditions that could result in the release of barium from naturally-occurring barite in site soils was completed using a geochemical model. If barite dissolution is responsible for the elevated concentrations of barium, then there should be a correlation between barium concentrations observed in groundwater and simulated barium concentrations released from barite dissolution.

In addition to evaluation of a potential barium source, the mechanism of barium release was simulated as well. Barite dissolution would release sulfate and therefore, should be controlled by sulfate concentrations. Sulfate concentrations in saline waters have been shown to control the solubility of barite and the saturation concentration of dissolved barium (API, 1995). Thus, with all other concentrations held constant, a decrease in sulfate should result in increased barite dissolution. Barite minerals are increasingly soluble in high ionic strength (saline) environments (API, 1995) and, as such, an increase in ionic strength (salinity) should increase barite dissolution.

2.5 Barium Concentrations at Other Sites

Ash leachate has been characterized at numerous different CCR sites around the country by the Electric Power Research Institute (EPRI; EPRI, 2016). Review of the mean concentrations of barium in leachate at other CCR sites can provide insight on the potential for release of barium from CCR units. The absence of elevated barium concentrations in ash leachate at numerous different CCR sites would suggest that barium is not typically released from CCR units.

2.6 Field Activities

The ASD approach included field investigations of naturally-occurring site materials as the source for the barium SSL observed at the downgradient location APMW-2. For this evaluation, direct push technology (DPT) borings were advanced at the locations shown on **Figure 3**.

- Ten DPT borings (DPT-1 through DPT-10) were advanced adjacent to the ten downgradient compliance monitoring wells (APMW-1 through APMW-10 in the CCR monitoring well network).
- Three DPT borings (DPT-11 through DPT-13) were completed in the vicinity of APMW-11 and APMW-12, the existing background monitoring well locations,

which are located upgradient of the former CCR Unit and therefore would not be influenced by discharge from the former CCR Unit.

Soil samples were collected from both the Unit 2 clay and the Unit 3 aquifer (see *Annual Groundwater Monitoring Report* [SCS, 2020] for more details on the site geology) within each DPT borehole. Groundwater samples were collected from the ten downgradient CCR monitoring wells. Soil and groundwater samples were analyzed for the following analytes.

DPT Locations or Monitoring Wells [Environmental Media]	Analytes	Compiled Data Location
DPT-1 through DPT-10 [Soil]	Appendix IV Uranium Thorium Acid Volatile Sulfide Barium (field test)	Table 1a
	Barite (X-ray diffraction; XRD)	Table 2
DPT-11 through DPT-13 [Soil]	Appendix IV Uranium Thorium	Table 1a
APMW-1 through APMW-10 [Groundwater]	Sulfate Sulfide (field test and laboratory)	Table 1b

Groundwater and soil samples were sent to TestAmerica and Mineralogy, Inc. (soil XRD analysis only), under chain of custody protocols. Compiled analytical results from TestAmerica and Mineralogy, Inc. are provided in **Tables 1a, 1b, and 2**, and laboratory reports are compiled in **Appendix A**. Boring logs for DPT points are presented in **Appendix B**.

3.0 ALTERNATE SOURCE DEMONSTRATION

The following sections describe data evaluation and assessment activities to evaluate alternate source(s) for the barium SSL at Plant Watson. The primary lines of evidence supporting the conclusion that the former CCR Unit is not the source of elevated barium observed in well APMW-2 include:

- Naturally-occurring barium is present in site soils;
- Ash porewater does not appear to be a source of statistically elevated barium in Unit 3 groundwater;
- Geochemical modeling indicates a naturally-occurring barium mineral called barite may account for the barium concentrations observed in Unit 3 groundwater; and
- Barium is not typically observed at elevated concentrations in groundwater at CCR sites.

3.1 Analysis of Soils

Site soils contain naturally-occurring barium. Barium was detected at concentrations ranging from 0.996 to 176 milligrams per kilogram (mg/kg) in soil samples from the ASD DPT investigation at locations adjacent to the ten downgradient CCR monitoring wells (**Table 1a**). Results of the soil analyses show barium was also present in upgradient soils greater than 30 mg/kg, which was greater than at least half of the barium concentrations in soil collected downgradient of the former CCR Unit (downgradient soils). The maximum barium concentration in downgradient soils was observed in APMW-4, which was not the location of the barium SSL in groundwater (i.e., APMW-2). The presence of barium at appreciable concentrations in upgradient site soils suggests the potential for a naturally-occurring source of barium in soil. In addition, the detection of barium in soil at APMW-4 at a concentration higher than concentrations in the soil at APMW-2 (where there is a corresponding SSL in groundwater), indicates that there may be a localized geochemical mechanism influencing barium solubility near APMW-2.

During the ASD DPT investigation, soils collected from DPT points adjacent to the ten downgradient CCR monitoring wells were analyzed in the field by X-ray fluorescence (XRF) as a screening tool to select the appropriate sample interval for mineralogical analysis by XRD (**Table 1a**). The results of the XRD analysis, summarized in **Table 2**,

did not identify barite mineral content above the XRD detection limit of 0.5%. However, barite concentrations less than 0.5% are likely present (see Section 3.3) and can serve as a natural source of barium to groundwater. The XRD analysis identified feldspathic and mica minerals in 80 and 70 percent, respectively, of the samples analyzed. Both of these mineral groups commonly contain barium as a replacement element (Klein, 1994) and are subject to processes that can result in the release of barium.

3.2 Analysis of Groundwater and Ash Porewater

Porewater samples from the former CCR unit do not contain concentrations of barium at concentrations that can account for barium observed in groundwater samples from well APMW-2. Analysis of ash porewater samples collected on September 19, 2019 indicate barium concentrations ranging from 0.075 to 0.78 milligrams per liter (mg/L) (**Table 3**). For comparison, the barium concentrations in the co-located samples from the underlying Unit 3 aquifer ranged from 0.18 to 1.5 mg/L.

The mean barium concentration in ash porewater was statistically compared using a Welch's t-test to the mean barium concentration in the underlying Unit 3 aquifer. The Welch's t-test is used to evaluate if two sample means are statistically different from one another. The Welch's t-test assumes that each dataset is normally distributed, but that the variances between the datasets are not equal. The results of this statistical test are presented in **Table 4** and indicate that, with 95% confidence, the mean barium concentration in the ash porewater is statistically different from the mean barium concentration in the Unit 3 aquifer. These observations are consistent with the conclusion that a source other than the former CCR Unit resulted in the barium SSL in Unit 3.

Barium concentrations in ash porewater were below the GWPS of 2 mg/L. To evaluate the likelihood that the mean barium concentration in the ash porewater would be below the GWPS regardless of spatial location in the former CCR Unit, a one-sample Student's t-test was performed. The Student's t-test assumes that the concentrations of barium in ash porewater are normally distributed. The results of the Student's t-test are presented in **Table 4** and indicate that, with 99% confidence, the mean barium concentration in ash porewater is below the GWPS of 2 mg/L. In addition, the 95% upper confidence limit (UCL95) of barium in ash porewater was calculated using ProUCL 5.1 (ProUCL; USEPA, 2015). ProUCL recommended using the UCL95 based upon Land's H-statistic, which estimated the UCL95 of total barium in ash porewater to be approximately 0.66 mg/L (i.e., below the GWPS of 2.0 mg/L) (**Appendix C**).

3.3 Analysis of the Geochemical Conditions at the Site

A geochemical model indicated geochemical conditions at the site could result in the release of barium from a common, naturally-occurring mineral called barite (i.e., barium sulfate) in site soils (see **Appendix D** for details). The findings of this modeling include:

- A strong positive correlation (coefficient of determination $[R^2] = 0.98$) between the observed barium concentration in Unit 3 groundwater and the simulated groundwater concentrations of barium released from barite dissolution (see **Figure 4**). This indicates that dissolution from naturally-occurring barite is the likely source for the observed barium concentrations in groundwater at the site.
- Low-levels of barite in site soils result in simulated concentrations similar to those observed at APMW-2. The model indicates that the amount of barite in soils necessary to achieve the simulated concentrations in groundwater is less than the detection limit of the XRD instrument of 0.5%.
- The model predicts that an increase in groundwater ionic strength (i.e., salinity) results in increased barium dissolution from barite. This is consistent with the finding that elevated ionic strength corresponded to an increased solubility of barite (API, 1995). A prior evaluation (SCS, 1995) indicated that the geochemical conditions of groundwater beneath the former CCR Unit resemble the adjacent saline/brackish surface water with high concentrations of total dissolved solids (TDS) and chloride (i.e., high ionic strength). Elevated levels of naturally-occurring TDS, chloride, and other components contributing to salinity could serve as a potential mechanism for release of barium from naturally-occurring barite in site soils.
- The model supports the theory that low concentrations of sulfate result in increased barium dissolution from barite. As barite dissolution would result in the release of sulfate, the concentration of sulfate in groundwater will limit barite dissolution (API, 1995). Low sulfate concentrations are observed in select downgradient monitoring wells (e.g., APMW-1R and AMPW-2), where barium groundwater concentrations are higher. Therefore, low sulfate driven barite dissolution could serve as a contributing mechanism to the observed barium SSL in APMW-2.

The model predictions and available literature (API, 1995) suggest that low levels of barite are likely present and a naturally-occurring source of barium in site soils. In addition, two potential mechanisms based on existing (naturally occurring) conditions exist at the site for barite dissolution (i.e., elevated ionic strength and low sulfate concentrations) that likely lead to the elevated concentration of barium observed in APMW-2.

3.4 Barium Concentrations at Other CCR Sites

In 2016, EPRI investigated the characterization of CCR leachate at numerous CCR sites (EPRI, 2016). Key findings from this investigation with respect to barium content include:

- 100% of the site-averaged concentrations of barium in CCR leachate were lower than the GWPS of 2 mg/L. 90% of average site concentrations were less than 0.1 mg/L.
- Due to low leachate concentrations and attenuation (complexation with sulfate) of barium, the potential for a barium SSL in groundwater due to a CCR unit release is low.
- Barium solubility at many sites was controlled by barite.

EPRI concluded that barium was not a likely constituent to be released from CCR units into groundwater. Review of this information suggests that the barium SSL is not due to a release from the former CCR Unit, consistent with literature review of ash leachate concentrations at CCR sites.

4.0 CONCLUSIONS

This ASD demonstrates that naturally-occurring sources of barium result in the elevated barium concentrations observed in groundwater at APMW-2, downgradient of the former CCR Unit. Supporting conclusions include the following:

- Naturally-occurring barium and likely barite are present in site soils as documented by soil analyses presented in this ASD. Barium is present in both upgradient and downgradient soil locations, which indicates the potential for a naturally-occurring source that may contribute to the elevated barium concentration observed in groundwater at APMW-2.
- Barium concentrations in ash porewater ranged from 0.075 to 0.78 mg/L, while barium in Unit 3 groundwater ranged from 0.18 to 1.5 mg/L. The barium concentration in the ash porewater is statistically lower, with 95% confidence, than the barium concentration observed in Unit 3 groundwater. In addition, statistical evaluation of the ash porewater data indicates that the mean (99% confidence) and UCL95 barium concentrations in the ash porewater do not exceed the GWPS. These observations are consistent with the conclusion that a source other than the ash porewater resulted in the barium SSL in Unit 3 groundwater.
- The geochemical model predictions suggest that low levels of barite are likely present and a naturally-occurring source of barium in site soils. Low concentrations of barite are anticipated to account for the barium concentrations observed in Unit 3 groundwater. As described in this ASD, two potential mechanisms exist at the site for barite dissolution that likely lead to the elevated concentration of barium observed in APMW-2.
- Based on the literature, barium concentrations in CCR leachate were consistently below the GWPS across numerous CCR sites. EPRI concluded that barium was not a likely constituent to be released from CCR units into groundwater.

The combination of these lines of evidence indicate that naturally-occurring sources of barium result in the elevated barium concentrations observed in APMW-2.

Table 4.
Student T-test and Welch's T-test Results for Barium in Former CCR Unit Porewater and Unit 3 Groundwater
Plant Watson, Gulfport, Mississippi

Parameter	Barium in Ash Porewater (Student's T)	Barium in Unit 3 (Student's T)	Barium (Welch's T)
Sample Count (n)	7	6	--
Sample Mean (x)	0.226	0.663	--
Standard Deviation (d)	0.236	0.496	--
Population Mean (u)	2	2	--
degrees of freedom (v)	6	5	6.902
t	-19.92	-6.59	-1.97
P(T<t)	0.00000052	0.00060	0.04452
Summary of Sample Means	99% confidence that barium is < GWPS	99% confidence that barium is < GWPS	95% confidence barium in ash is statistically lower than Unit 3

Notes:

1. Student's T calculation
$$t = \frac{x - u}{\frac{d}{\sqrt{n}}}$$

2. Welch's T-test calculation
$$t = \frac{x_1 - x_2}{\sqrt{\frac{d_1^2}{n_1} + \frac{d_2^2}{n_2}}}$$

$$v = \frac{\left(\frac{d_1^2}{n_1} + \frac{d_2^2}{n_2}\right)^2}{\frac{d_1^4}{n_1^2(n_1 - 1)} + \frac{d_2^4}{n_2^2(n_2 - 1)}}$$

3. Population mean is the groundwater protection standard (GWPS).
4. -- indicates these values are the same as those used in the Student's T test
5. Where applicable, units are in milligrams per liter (mg/L)
6. CCR indicates coal combustion residuals

CONDITIONS AND QUALIFICATIONS

Mineralogy, Inc. will endeavor to provide accurate and reliable laboratory measurements of the samples provided by the client. The results of any x-ray diffraction, petrographic or core analysis test are necessarily influenced by the condition and selection of the samples to be analyzed. It should be recognized that geological samples are commonly heterogeneous and lack uniform properties. Mineralogical, geochemical and/or petrographic data obtained for a specific sample provides compositional data pertinent to that specific sampling location. Such “site-specific data” may fail to provide adequate characterization of the range of compositional variability possible within a given project area, thus the “projection” of these laboratory findings and values to adjoining, “untested” areas of the formation or project area is inherently risky, and exceeds the scope of the laboratory work request. Hence, Mineralogy, Inc. shall not assume any liability risk or responsibility for any loss or potential failure associated with the application of “site or sample-specific laboratory data” to “untested” areas of the formation or project area. Unless otherwise directed, the samples selected for analysis will be chosen to reflect a visually representative portion of the bulk sample submitted for analysis. Where provided, the interpretation of x-ray diffraction, petrographic or core analysis results constitutes the best geological judgment of Mineralogy, Inc., and is subject to the sampling limitations described above, and the detection limits inherent to semi-quantitative and/or qualitative mineralogical and microscopic analysis. Mineralogy, Inc. assumes no responsibility nor offers any guarantee of the productivity, suitability or performance of any oil or gas well, hydrocarbon recovery process, dimension stone, and/or ore material based upon the data or conclusions presented in this report.

This report is to only be replicated in its entirety.

Sample Retention: Samples will be stored for a period of 30 days and thereafter discarded. If additional sample storage time and/or return shipping is required, appropriate charges will be billed to the client.

Comments

No additional comments.

Receipt

The samples were received on 9/20/2019 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.2° C and 1.7° C.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method(s) SM 5310C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 180-293568 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5).

Method(s) SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to confirmation of over-residue; both results are reported : 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5).

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5) and (180-95981-F-1 DU). The reporting limits (RLs) have been adjusted proportionately.

Method(s) SM 2320B: Reanalysis of the following samples were performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5)

Method(s) 351.2: The inter-parameter relationship does not meet acceptable criteria. Reanalysis was preformed, and the results confirmed.

2S-GS (180-95981-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-95981-1

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

<p>Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.</p>

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/20/2019 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.2° C and 1.7° C.

Receipt Exceptions

The containers provided for the following samples did not match the information listed on the Chain-of-Custody (COC): 2S-GS (180-95981-4) and DUP-01 (180-95981-5). No containers were provided for Oil and Grease, RAD, and Metals analysis. Analysis was cancelled for these tests until further instruction from the PM.

Information from PM on 10/9/2019:

Client couldn't fill all the containers before fed ex location closed; He sent what he had - he did have short holds collected hence the need to send that day; He then went back to the site to fill the sample containers he didn't fill; He called me in the morning to let me know that we would be missing some containers ; sample volumes for these missing parameters were sent with the next shipment.

RAD

Methods 903.0, 9315: Radium-226 prep batch 160-444126-

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5), (LCS 160-444126/1-A), (LCSD 160-444126/2-A) and (MB 160-444126/23-A)

Methods 904.0, 9320: Ra-228 Prep Batch 160-444140

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5), (LCS 160-444140/1-A), (LCSD 160-444140/2-A) and (MB 160-444140/23-A)

Method PrecSep_0: Radium 228 Prep Batch 160-444140:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-444126:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/21/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.3° C, 1.6° C, 1.6° C, 3.4° C and 3.4° C.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Methods 6020, 6020A: The following sample was diluted due to the nature of the sample matrix: 4D-GS (180-96046-1). Elevated reporting limits (RLs) are provided.

Methods 6020, 6020A, 6020B: The ICSAB for batch 180-295148 was outside the acceptance limits for element: silicon. Elevated concentration of silicon within the stock reagent is suspected.

Method 6020: The low level continuing calibration verification (CCVL) associated with batch 180-295148 recovered above the upper control limit for sodium. The samples associated with this CCVL were 10x the RL for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 5310C: The RPD between the duplicate analyses was >10%. The difference between the results was less than the reporting limit; therefore the results are reported with this NCM.

4D-GS (180-96046-1)

Method SM 5310C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 180-294515. LCS/LCSD analyzed.

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), EB-01 (180-96046-6) and (180-96046-F-3 DU). The reporting limits (RLs) have been adjusted proportionately.

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: DUP-02 (180-96046-8). The reporting limits (RLs) have been adjusted proportionately.

Methods 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8).

Method SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to confirmation of over-residue; both results are reported : 4D-GS (180-96046-1) and 6D-GS (180-96046-5).

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 4D-GS (180-96046-1) and 6D-GS (180-96046-5). The reporting limits (RLs) have been adjusted proportionately.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

No additional comments.

Receipt

The samples were received on 9/21/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.3° C, 1.6° C, 1.6° C, 3.4° C and 3.4° C.

RAD

Method 9315: Radium-226 Prep Batch 160-444175

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7), DUP-02 (180-96046-8), (LCS 160-444175/2-B) and (MB 160-444175/22-A)

Method 9320: <Ra-228> Prep Batch 160-444178

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7), DUP-02 (180-96046-8), (LCS 160-444178/2-B) and (MB 160-444178/22-A)

Method PrecSep_0: Radium 228 Prep Batch 160-444175:

The following sample had cloudy discoloration:4D-GS (180-96046-1).

Method PrecSep_0: Radium 228 Prep Batch 160-444175:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision

Method PrecSep_0: Radium 228 Prep Batch 160-445767:

The following samples were prepared at a reduced aliquot due to limited volume for re-prep: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). Sample 180-96046-D-1 had light yellow discoloration.

Method PrecSep_0: Radium 228 Prep Batch 160-445767:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-444175:

The following sample had cloudy discoloration:4D-GS (180-96046-1).

Case Narrative

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96046-2

Job ID: 180-96046-2 (Continued)

Laboratory: Eurofins TestAmerica, Pittsburgh (Continued)

Method PrecSep-21: Radium 226 Prep Batch 160-444175:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-445766:

The following samples were prepared at a reduced aliquot due to limited volume for re-prep: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). Sample 180-96046-D-1 had light yellow discoloration.

Method PrecSep-21: Radium 226 Prep Batch 160-445766:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Job ID: 180-96046-2

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 180-96046-2

Login Number: 96046

List Source: Eurofins TestAmerica, Pittsburgh

List Number: 1

Creator: Say, Thomas C

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/24/2019 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.5° C, 1.6° C, 1.8° C and 4.0° C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): 5D-GS (180-96077-2). The container labels for the toc containers only list a sample id of 5D-GR, while the COC lists 5D-GS. The id on the COC was used.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 5310C: The RPD between the duplicate analyses was >10%. The difference between the results was less than the reporting limit; therefore the results are reported with this NCM.

7D-GS (180-96077-3)

Method SM 5310C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 180-294581. LCS/LCSD analyzed.

Methods 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7).

Method SM 2320B: Due to the high concentration of alkalinity, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 480-495181 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 351.2: The inter-parameter relationship does not meet acceptable criteria. Reanalysis was preformed, and the results confirmed.

6S-GS (180-96077-4), FB-02 (180-96077-5) and EB-02 (180-96077-6)

Method SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to first result was over-residue; both results are reported : 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7).

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7). The reporting limits (RLs) have been adjusted proportionately.

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Method Summary

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96077-1

Method	Method Description	Protocol	Laboratory
RSK-175	Dissolved Gases (GC)	RSK	TAL BUR
EPA 300.0 R2.1	Anions, Ion Chromatography	EPA	TAL PIT
EPA 6020	Metals (ICP/MS)	SW846	TAL PIT
EPA 7470A	Mercury (CVAA)	SW846	TAL PIT
SM 2340B	Total Hardness (as CaCO ₃) by calculation	SM	TAL PIT
1664B	HEM and SGT-HEM	1664B	TAL BUF
350.1	Nitrogen, Ammonia	MCAWW	TAL BUF
351.2	Nitrogen, Total Kjeldahl	MCAWW	TAL BUF
353.2	Nitrogen, Nitrate-Nitrite	MCAWW	TAL BUF
SM 2320B	Alkalinity	SM	TAL BUF
SM 2540C	Solids, Total Dissolved (TDS)	SM	TAL BUF
SM 2540D	Solids, Total Suspended (TSS)	SM	TAL PIT
SM 4500 CO ₂ B	Free Carbon Dioxide	SM	TAL BUF
SM 4500 H+ B	pH	SM	TAL BUF
SM 4500 P E	Phosphorus	SM	TAL BUF
SM 5310C	Total Organic Carbon	SM	TAL PIT
1664B	HEM and SGT-HEM (Aqueous)	1664B	TAL BUF
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	TAL PIT
351.2	Nitrogen, Total Kjeldahl	MCAWW	TAL BUF
7470A	Preparation, Mercury	SW846	TAL PIT
Distill/Ammonia	Distillation, Ammonia	None	TAL BUF

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Number: 180-96077-1

Login Number: 96077
List Number: 2
Creator: Mohn, Taylor J

List Source: Eurofins TestAmerica, Burlington
List Creation: 09/25/19 11:35 AM

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	Seal present with no number.
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.5°C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/24/2019 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.5° C, 1.6° C, 1.8° C and 4.0° C.

RAD

Methods 903.0, 9315: Radium-226 Prep Batch 160-444304

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6), DUP-03 (180-96077-7), (LCS 160-444304/1-A), (LCSD 160-444304/2-A) and (MB 160-444304/21-A)

Methods 904.0, 9320: Radium-228 prep batch 160-444355

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5S-GS (180-96077-1), FB-02 (180-96077-5), EB-02 (180-96077-6), (LCS 160-444355/1-A), (LCSD 160-444355/2-A) and (MB 160-444355/21-A)

Methods 904.0, 9320: Radium-228 Prep Batch 160-444355

The following batch 444355 has a failing LCS at 134% and LCSD at 133% (limits are 75%-125%). The spikes are failing, the MB and RPD/RER is within limits. The sample activity is below the MDC's. The data has been reported with this narrative.

5S-GS (180-96077-1), FB-02 (180-96077-5), EB-02 (180-96077-6), (LCS 160-444355/1-A), (LCSD 160-444355/2-A) and (MB 160-444355/21-A)

Methods 904.0, 9320: Radium-228 Prep Batch 160-447604

The detection goal was not met for the following samples due to insufficient sample available for analysis: (MB 160-447604/20-A), (400-176940-A-14-E) and (400-176940-A-14-F DU). Samples were reduced for re-prep; see Prep NCM 160-181450. Analytical results are reported with the detection limit achieved.

Methods 904.0, 9320: Radium-228 prep batch 160-447604

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), DUP-03 (180-96077-7), (LCS 160-447604/1-A), (MB 160-447604/20-A), (400-176940-A-14-E) and (400-176940-A-14-F DU)

Case Narrative

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96077-2
SDG: 1

Job ID: 180-96077-2 (Continued)

Laboratory: Eurofins TestAmerica, Pittsburgh (Continued)

Method PrecSep_0: Radium 228 Prep Batch 160-444355:

The following samples had light discoloration: 5S-GS (180-96077-1), 5D-GS (180-96077-2) and 7D-GS (180-96077-3).

Method PrecSep_0: Radium 228 Prep Batch 160-444355:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep_0: Radium 228 Prep Batch 160-447604:

Due to insufficient volume, the following samples were prepared a reduced aliquot for re-prep: 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7). Samples 180-96077-D-3 and 180-96077-C-7 had yellow discoloration.

Method PrecSep-21: Radium 226 Prep Batch 160-444304:

The following samples had light yellow discoloration: 5D-GS (180-96077-2), 7D-GS (180-96077-3) and DUP-03 (180-96077-7).

Method PrecSep-21: Radium 226 Prep Batch 160-444304:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company

Job ID: 180-96077-2
SDG: 1

Qualifiers

Rad

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Source: Eurofins TestAmerica, Pittsburgh

List Number: 1

Creator: Watson, Debbie

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-187053-1

General Chemistry

Method SM 4500 S2 D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-486751 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 4500 S2 D: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 400-486751 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Sulfide in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method SM 4500 SO4 E: The following samples were diluted to bring the concentration of target analytes within the calibration range: APMW-3 (400-187053-3), APMW-4 (400-187053-4), APMW-5 (400-187053-5), APMW-6R (400-187053-6), APMW-7 (400-187053-7), APMW-8 (400-187053-8), APMW-9 (400-187053-9), APMW-10 (400-187053-10), DUP-01 (400-187053-11), (400-187053-A-7 MS) and (400-187053-A-7 MSD). Elevated reporting limits (RLs) are provided.

Method SM 4500 SO4 E: Due to the concentration of sulfates in the parent sample the MS/MSD was diluted after the spike. The spike amount was adjusted by the dilution factor. (400-187053-A-7 MS) and (400-187053-A-7 MSD)

Job ID: 400-187053-1

Qualifiers

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 400-187053-1

Login Number: 187053

List Source: Eurofins TestAmerica, Pensacola

List Number: 1

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.5°C, 3.5°C, 1.9°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job Narrative 400-187320-1

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria of <6°C (16.6°C, 17.0°C, 17.1°C, 17.9°C) and without any cooling agent (ice or otherwise): DPT-1-SS BA V2 (22-24) (400-187320-1), DPT-1-SS BA V3 (38-40) (400-187320-2), DPT-2-SS BA V2 (26-27) (400-187320-3), DPT-2-SS BA V3 (37-38) (400-187320-4), DPT-3-SS BA V2 (24-25) (400-187320-5), DPT-3-SS BA V3 (29-30) (400-187320-6), DPT-4-SS BA V2 (15-16) (400-187320-7), DPT-4-SS BA V3 (28-29) (400-187320-8), DPT-5-SS BA V2 (17-18) (400-187320-9), DPT-5-SS BA V3 (23-24) (400-187320-10), DPT-6-SS BA V2 (400-187320-11), DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS BA V3 (23-24) (400-187320-23), DPT-7-SS BA V2 (18-19) (400-187320-24), DPT-7-SS BA V3 (27-28) (400-187320-25), DPT-8-SS BA V2 (25-26) (400-187320-26), DPT-8-SS BA V3 (39-40) (400-187320-27), DPT-9-SS BA V2 (27-28) (400-187320-28), DPT-9-SS BA V3 (32-33) (400-187320-29), DPT-10-SS BA V2 (22-23) (400-187320-30), DPT-10-SS BA V3 (25-26) (400-187320-31), DUP-01 (400-187320-32), DUP-02 (400-187320-33), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), DUP-01 (400-187320-43) and DUP-02 (400-187320-44)

Department General Chemistry

Method 9034_Calc_AVS: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 180-314515 and analytical batch 180-314525 were outside control limits, low. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limit

Method 9034_Calc_AVS: The matrix spike duplicate (MSD) recoveries for preparation batch 180-314620 and analytical batch 180-314627 were outside control limits (low recoveries). Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limit

Method Summary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-187320-1
SDG: Plant Watson

Method	Method Description	Protocol	Laboratory
6020	Metals (ICP/MS)	SW846	TAL SL
2540G	SM 2540G	SM22	TAL PIT
EPA 9034	Sulfide, Acid soluble and Insoluble (Titrimetric)	SW846	TAL PIT
Moisture	Percent Moisture	EPA	TAL SL
3050B	Preparation, Metals	SW846	TAL SL

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

RAD

Method 9315: Radium-226 Prep Batch 160-469589. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), (LCS 160-469589/1-A), (MB 160-469589/23-A) and (400-187320-A-12-B DU)

Method 9315: Ra-226 Prep Batch 160-469806. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-01 (400-187320-43), DUP-02 (400-187320-44), (LCS 160-469806/1-A), (MB 160-469806/11-A) and (400-187320-A-43-G DU)

Method 9320: Ra-228 Prep Batch 160-469648. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), (LCS 160-469648/1-A), (MB 160-469648/23-A) and (400-187320-A-12-D DU)

Method 9320: Radium-228 Prep Batch: 160-469808. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-01 (400-187320-43), DUP-02 (400-187320-44), (LCS 160-469808/1-A), (MB 160-469808/11-A) and (400-187320-A-43-I DU)

Method DPS-0: 400-187320-43 precipitated a very small pellet during into ingrowth. All samples will be re-prepped. DUP-01 (400-187320-43), DUP-02 (400-187320-44) and (400-187320-A-43 DU)

Method DPS-21: 400-187320-43 precipitated a very small pellet during into ingrowth. All samples will be re-prepped. DUP-01 (400-187320-43) and DUP-02 (400-187320-44)

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-187320-3

Metals

Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 160-471675 and analytical batch 160-471679 were outside control limits for lithium. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (400-187320-B-12-E MS) and (400-187320-B-12-F MSD)

Method 6020: preparation batch 160-471675 and analytical batch 160-471679 The MS (MSD) recovery and precision for antimony is outside the established QC limits. The MS/MSD is a multiple element spiking solution. All other elements in the spiking solution are either within acceptable criteria or have acceptable precision. This indicates potential matrix interference in the sample. Method performance is demonstrated by acceptable LCS recovery. No further action is required. (400-187320-B-12-E MS) and (400-187320-B-12-F MSD)

Method 6020: preparation batch 160-471675 and 160-471676 and analytical batch 160-471679 Due to linear range check (LRC) failures, the linear range for arsenic (200ppb) and molybdenum (100ppb) has been lowered to the concentration of the highest calibration standard. The LCS and MS/MSD were above the linear range, but were within acceptable recovery limits. (LCSSRM 160-471676/3-A), (400-187320-B-12-E MS), (400-187320-B-12-F MSD), (400-187320-A-43-O MS) and (400-187320-A-43-P MSD)

Client requested App III metals list added.

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

List Number: 1

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
400-187407-1

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria of $<6^{\circ}\text{C}$ (16.2°C), with no cooling agent present: DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5) and DPT-13-SS RA V3 (400-187407-6).

A solid 4oz jar container for the following sample was received broken: DPT-12-SS RA V3 (400-187407-4). The sample was transferred to a new container with minimal loss; sufficient sample is remaining for analysis.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Receipt Exceptions

A solid 4oz jar container for the following sample was received broken: DPT-12-SS RA V3 (400-187407-4). The sample was transferred to a new container with minimal loss; sufficient sample is remaining for analysis.

Gas Flow Proportional Counter

Method 9315_Ra226: Ra-226 Prep Batch 160-469806 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5), DPT-13-SS RA V3 (400-187407-6), (LCS 160-469806/1-A), (MB 160-469806/11-A), (400-187320-A-43-F) and (400-187320-A-43-G DU)

Method 9320_Ra228: Radium-228 Prep Batch: 160-469808 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5), DPT-13-SS RA V3 (400-187407-6), (LCS 160-469808/1-A), (MB 160-469808/11-A), (400-187320-A-43-H) and (400-187320-A-43-I DU)

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFI	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Metals

Method 6020: preparation batch 160-471676 and analytical batch 160-471679 Due to linear range check (LRC) failures, the linear range for arsenic (200ppb) and molybdenum (100ppb) has been lowered to the concentration of the highest calibration standard. The LCS and MS/MSD were above the linear range, but were within acceptable recovery limits. (LCSSRM 160-471676/3-A), (400-187320-A-43-O MS) and (400-187320-A-43-P MSD)

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 400-187407-3

SDG Number: Plant Watson

Login Number: 187407

List Source: Eurofins TestAmerica, Pensacola

List Number: 1

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

85												
86	Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.											
87	Recommendations are based upon data size, data distribution, and skewness.											
88	These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).											
89	However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.											
90												
91	ProUCL computes and outputs H-statistic based UCLs for historical reasons only.											
92	H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.											
93	It is therefore recommended to avoid the use of H-statistic based 95% UCLs.											
94	Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.											
95												

APPENDIX D

Geochemical Modeling Summary

Memorandum

Date: 7 August 2020
To: Charles Blount, Mississippi Power Company
Copies to: Brant Pettis, Balch & Bingham, LLP; Lauren Parker-Collins and Eric Wallis, Southern Company Services
From: Hari Parthasarathy, Ben Amos, Lane Dorman, Lauren Fitzgerald, Geosyntec Consultants, Inc. (Geosyntec)
Subject: Plant Watson Former CCR Unit - Geochemical Modeling of Barium Dissolution from Barite

INTRODUCTION AND OBJECTIVES

In accordance with the Coal Combustion Residuals (CCR) Rule, a groundwater monitoring system was installed at the boundary of the former CCR Unit at Mississippi Power Plant Jack Watson Electric Generating Plant (site). Statistical analysis of groundwater monitoring data collected in August 2019 and March 2020 identified statistically significant levels (SSL) of barium at the downgradient compliance well APMW-2.

One potential mechanism that could explain the barium SSL is the dissolution of barium from naturally-occurring barium containing minerals and deposits such as barite (BaSO_4) which is sparingly soluble in water.

Geosyntec developed an equilibrium geochemical model (Model herein) using the United States Geologic Service (USGS) PHREEQC program to:

- evaluate whether dissolution of barium from naturally-occurring barite could result in the SSL at APMW-2; and
- more generally, whether the dissolution of barium from barite could explain the observed concentrations at downgradient compliance wells at the former CCR Unit.

This purpose of this memorandum is to describe the Model approach, inputs, outputs, and results.

DEFINITIONS

The following standard terms were defined in the development of this Model:

Equilibrium Phases: Crystalline compounds with well-defined chemical compositions that make up the groundwater aquifer/formation matrix.

Solution: The groundwater present in the aquifer/formation that interacts with the matrix.

Model Run: A simulation of the geochemical mode with defined Equilibrium Phases and Solution chemistry.

MODELING APPROACH

PHREEQC is computer program for simulating chemical reactions and transport processes in natural and engineered systems¹. The program is based on the chemistry of aqueous solutions interacting with minerals, gases, solid solutions, exchangers, and sorption surfaces. Although PHREEQC can simulate kinetic reactions with rate equations, this Model was developed as an equilibrium simulation, and kinetics of precipitation and/or dissolution reactions were not evaluated. The inputs and outputs used in this Model are described below.

Approach

The Model was developed to simulate equilibrium conditions between groundwater and the aquifer matrix. Each Model Run consisted of an assumed solid-phase concentration of barite as the only barium source mineral in the matrix. Five different simulations were run with Solution chemistries defined based on observed groundwater concentrations at the following wells: APMW-1R, APMW-2, APMW-3, APMW-4, and APMW-5. The wells were chosen based on their geographical location to be representative of general groundwater quality around the former CCR Unit.

The outputs generated by the Model were evaluated to assess the concentration of dissolved barium and compared to observed barium groundwater concentrations. As a conservative approach, Solutions (i.e., groundwater) were assumed to not contain any barium prior to the equilibrium reaction (i.e., it was assumed that the barium observed in groundwater monitoring wells was a

¹ Parkhurst, D.L. and Appelo, C.A.J., 1999. User's guide to PHREEQC (Version 2): A computer program for speciation, batch-reaction, one-dimensional transport, and inverse geochemical calculations.

result of barite dissolution only). Model inputs and outputs are described in detail in the next sections.

Inputs

For the purposes of simulating actual conditions, the Model simulations assume a fixed mass of barite in the matrix. Soil samples collected using direct push technology (DPT) in April 2020 were analyzed for total barium. The average barium concentration (24.4 milligrams per kilogram) was assumed to be in the form of barite (i.e., 0.004% barite). This is consistent with X-ray diffraction (XRD) data, that indicates barite concentrations at the site are below the XRD detection limit of 0.5% by mass in the aquifer matrix. Based on the assumed concentration of barite, the calculated mass of barite in 1 kilogram (Kg) of host formation was 0.0002 moles. Although the XRD data indicates the presence of other mineral phases such as quartz and feldspar, the Model assumes that the only reactive mineral of interest is barite.

For the purpose of simulating barite dissolution, groundwater data collected from April 2018 through August 2019 was used to calculate the average composition of each well (**Table D1**). Typically, calcium, chloride, pH, sulfate, and oxidation-reduction potential (ORP) have been measured in the modeled wells as part of the CCR Rule and were used to develop average compositions for the Model. For other necessary parameters for the Model such as sodium, magnesium, potassium, and alkalinity, data from wells installed beneath the former CCR Unit and screened in the same aquifer unit as the CCR compliance wells were utilized to develop average compositions (**Table D1**). As stated previously, barium was assumed to be absent in the groundwater prior to Model simulation and as such was excluded from the inputs to the Model.

Geochemical Database

The PHREEQC program includes several databases of geochemical and thermodynamic data. Since the groundwater at the site is generally high in ionic strength, the *pitzer.dat* database was used in this Model. The *pitzer.dat* database included empirical thermodynamic data for ionic strength simulations.

Outputs

The primary output from the Model was the concentration of barium in the groundwater after reaction. From each Model Run, the simulated concentration of barium was converted to typical units (milligrams per liter [mg/L]) and compared to the average observed concentration of the wells of interest.

PHREEQC Input and Output files are presented in **Attachment D1**.

ASSUMPTIONS

To evaluate the geochemical interactions between groundwater and barite, the following assumptions were made:

1. The only source of barium in the aquifer is barite, present at 0.004%;
2. The distribution of barite is homogenous in the aquifer; and
3. Dissolution kinetics do not influence the final concentration of observed barium in groundwater (i.e., the system is in equilibrium)

DISSOLUTION OF BARITE

The simulated concentration of barium at each modeled monitoring well was compared to the average observed barium concentration (**Figure D1**).

Figure D1. Comparison of Simulated and Average Observed Concentrations of Barium

As presented in **Figure D1**, the simulated concentrations of barium are similar to the average observed concentrations at the downgradient compliance wells.

In general, the Model predicted dissolution of barite to be enhanced by low sulfate concentrations and/or high ionic strength, as reported in the literature².

- The Model predicts that an increase in groundwater ionic strength (i.e., salinity) results in increased barium dissolution from barite. This could serve as a potential mechanism for release of barium from naturally-occurring barite in site soils where ionic strength of groundwater is relatively high. A prior evaluation³ indicated that the geochemical conditions of groundwater beneath the former CCR Unit resemble the adjacent saline/brackish surface water with high concentrations of total dissolved solids (TDS) and chloride (i.e., high ionic strength).
- The Model supports the theory that low concentrations of sulfate result in increased barium dissolution from barite. As barite dissolution would result in the release of sulfate, the concentration of sulfate in groundwater will limit barite dissolution (API, 1995). Low sulfate concentrations are observed in select downgradient monitoring wells (e.g., APMW-1R and APMW-2), where barium groundwater concentrations are higher. Therefore, low sulfate driven barite dissolution could serve as a contributing mechanism to the observed barium SSL in APMW-2.

A sensitivity analysis was performed on assumed parameters such as alkalinity, sodium, potassium, and barite mass. Sensitivity analyses indicate that the Model has low to minimal sensitivity to the assumed parameters. Additionally, the actual mass of barite in the subsurface necessary to achieve observed concentrations was found to be no greater than 0.004%. This suggests that low-levels of barite in site soils are likely sufficient to results in the observed groundwater concentrations.

CONCLUSIONS

The results of this equilibrium geochemical model indicate that the concentration of barium observed at APMW-2 and other compliance wells can result from the dissolution of naturally-occurring barite when in contact with site groundwater.

1.0 INTRODUCTION

This document presents an alternate source demonstration (ASD) for the statistically significant levels (SSLs) of combined radium 226 and 228 (radium) observed in downgradient groundwater monitoring wells installed around the former coal combustion residuals (CCR) unit (Site) at Mississippi Power Company (Mississippi Power) Plant Jack Watson Electric Generating Plant (Plant Watson). The SSLs for radium were identified during semi-annual assessment groundwater monitoring performed at the Site.

This ASD has been prepared to meet the requirements of the United States Environmental Protection Agency's (USEPA's) CCR Rule 40 CFR Part 257.95(g)(3)(ii) which states that the owner or operator may demonstrate that a source other than the CCR unit caused the contamination, or that the SSL resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

This ASD presents multiple lines of evidence that the radium SSLs observed at the Site are due to a natural source and not the result of groundwater impacts from the former CCR unit. ^{226}Ra and ^{228}Ra along with their parent radionuclides uranium and thorium are naturally occurring in the soil matrix surrounding the Site. To support this ASD, the following lines of evidence and supporting analyses are discussed:

1. Uranium and thorium, radium's parent radionuclides, are naturally present in the soil matrix at Plant Watson.
 - a. Uranium and thorium are concentrated in a well-documented clay layer (Unit 2) that is observed across Plant Watson.
 - b. Soil sample analytical results indicate that uranium and thorium are naturally present in soils spatially upgradient and downgradient of the Site.
 - c. A positive correlation exists between parent and daughter radionuclides, indicating that uranium and thorium are naturally occurring sources of ^{226}Ra and ^{228}Ra in the soil matrix.
2. Radium isotopes are observed in the soil matrix at Plant Watson and are released to groundwater due to unique geochemical conditions present in downgradient wells.
 - a. Levels of radium are concentrated in a well-documented clay layer (Unit 2) that is observed across Plant Watson.
 - b. Soil sample analytical results indicate that radium isotopes are present in both upgradient and downgradient soils at the Site. The presence of radium

- in upgradient locations demonstrates that radium occurs naturally in the soil matrix.
- c. A positive correlation exists between thorium in the soil matrix and ^{228}Ra in groundwater, indicating that thorium is the likely source of ^{228}Ra in groundwater.
 - d. While naturally occurring uranium is contributing ^{226}Ra to downgradient groundwater (due to natural radioactive decay processes), naturally occurring uranium does not appear to account for all of the observed ^{226}Ra concentrations. Another natural source of ^{226}Ra (e.g., radium-substituted barite [barium sulfate]) is present in the soil matrix. This is readily apparent at APMW-1R and APMW-2 where the greatest concentrations of ^{226}Ra and barium in groundwater are encountered.
 - e. Literature indicates that elevated groundwater salinity and reducing conditions promotes the release of radium from soil matrices. Groundwater from monitoring wells with radium SSLs has elevated salinity (resembling the adjacent surface water which is naturally saline/brackish) and reducing conditions, making it conducive to radium release.
 - f. A leaching test confirmed that radium from upgradient soil samples can be released in the presence of groundwater with elevated salinity. Therefore, the soil matrix serves as a naturally occurring source of radium to groundwater under the geochemical conditions encountered downgradient of the former CCR unit.
 - g. Geochemical modeling indicates that low concentrations of sulfate in groundwater can result in the release of ^{226}Ra from radium-substituted barite. The two downgradient monitoring wells (APMW-1R and APMW-2) with the lowest sulfate concentrations have the highest ^{226}Ra concentrations, which supports the conclusion that Ra-barite is a source of ^{226}Ra to groundwater.
3. The spatial distribution of radionuclides supports the conclusion that radionuclides occur naturally in the soil matrix at Plant Watson.
 - a. Soil sample analytical results indicate that levels of uranium, thorium, and radium in soil upgradient of the former CCR unit are similar or slightly greater than downgradient levels. These radionuclides are naturally present and sources of radium at Plant Watson.
 - b. Soil and groundwater sample results from the additional background well locations (APMW-13, APMW-14, APMW-15, and APMW-16), which

are screened in a geochemical environment similar to downgradient monitoring wells (i.e., with an elevated salinity and reducing geochemical conditions), support the mechanism of radium release from upgradient soils due to interaction with saline groundwater. This is in contrast to the existing background monitoring wells APMW-11 and APMW-12 which were installed in a geochemical environment characterized by low salinity and oxidizing conditions, where radium concentrations were negligible. This further supports the conclusion that unique geochemical conditions downgradient of the former CCR unit, relative to upgradient, promote the release of radium to groundwater.

4. Radium concentrations in ash porewater are significantly lower than radium concentrations in the underlying Unit 3 groundwater (statistically evaluated at the 99% confidence level). As such, a release of porewater from the former CCR unit cannot account for the radium levels observed in groundwater downgradient of the former CCR unit.

Combined, these lines of evidence demonstrate that a source other than the former CCR unit resulted in the radium SSLs observed in downgradient groundwater monitoring wells.

2.0 BACKGROUND

2.1 Site Background

Plant Watson is in Harrison County, Mississippi near the City of Gulfport. Plant Watson is bordered by Interstate Highway 10 (I-10) to the north, Reichold Road and industrial land to the south, the tidally influenced Biloxi River to the east, and industrial land to the west (**Figure 1**). The former CCR unit operated on 102-acres to support coal-fired electricity generation at Plant Watson until April 2015. Saline water from the intake canal was used to sluice CCR into the former CCR unit during coal-fired operations. In 2015, Mississippi Power began operating Units 4 and 5 exclusively on natural gas and the former CCR unit was subsequently closed in May 2018 using the cap-in-place method as approved by the USEPA.

2.1.1 Geology

Four distinct geologic units have been encountered near the former CCR unit. Unit 1 is comprised of dike fill material and is underlain by Unit 2, a sandy clay aquitard. Material in the former CCR unit is at the same elevation as Unit 1 and above Unit 2. Unit 3, below Unit 2, is the uppermost aquifer beneath the former CCR unit and consists primarily of sand. The CCR monitoring well network is screened in Unit 3. Finally, Unit 4 (the deepest unit) acts as a clay aquitard underlying Unit 3.

2.1.2 Groundwater Monitoring

In accordance with 40 CFR 257.91, a CCR groundwater monitoring system was installed at the boundary of the former CCR unit at locations and depths to yield groundwater samples from the uppermost aquifer (Unit 3). The CCR monitoring well network was certified by a professional engineer (PE), and the certification was placed in the Operating Record. The locations of the CCR monitoring wells are shown on **Figure 2**.

Groundwater monitoring data collected during semiannual monitoring events completed in August 2019 and March 2020 were statistically analyzed pursuant to 40 CFR 257.93(f) using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities Unified Guidance* (Unified Guidance) (USEPA, 2009). Statistical analyses identified combined radium (i.e., the sum of radium isotopes ^{226}Ra and ^{228}Ra) as one of the constituents with SSLs above applicable groundwater protection standards (GWPSs). Combined radium SSLs were identified in the following wells: APMW-1R, APMW-2, APMW-3, APMW-7, and APMW-9.

In accordance with 40 CFR 257.95(g), a notification identifying SSL constituents (including combined radium) was prepared and placed in the Operating Record on January 13, 2020. Pursuant to 40 CFR 257.96, an assessment of corrective measures (ACM) was initiated on March 15, 2020.

2.1.3 Groundwater Geochemistry

Plant Watson is in a complex hydrogeologic setting characterized by multiple contributions to groundwater quality including upgradient fresh groundwater, brackish to saline surface water from the Biloxi River, and saltwater from the Gulf of Mexico. This mixing of multiple water sources leads to a unique geochemical signature in the vicinity of the former CCR unit. A groundwater quality assessment conducted in 1995 (SCS, 1995) indicated that groundwater in Unit 3 in the vicinity of the former CCR unit resembled surrounding saline surface waters, using total dissolved solids (TDS) as a proxy for salinity. In the 1995 study, groundwater characterized by TDS > 10,000 ppm was considered very saline, between 3,000 and 10,000 ppm TDS was considered moderately saline (brackish), and between 1,000 and 3,000 ppm TDS was considered slightly saline (brackish). Fresh water was characterized as having TDS below 1,000 ppm.

Like the 1995 study, recent groundwater sampling results (SCS, 2019 and SCS, 2020), also show that the Unit 3 groundwater salinity profile transitions from moderately saline or brackish in wells screened beneath the former CCR unit (TDS range of 4,700 to 9,000 milligrams per liter [mg/L] in September 2019) to fresh in existing background monitoring wells APMW-11 and APMW-12 (TDS range of 73 to 110 mg/L in August 2019) in the northwestern area of the Site (**Figure 3**). Additional background monitoring wells were installed in June 2020 in a tidal marsh upgradient of the former CCR unit (to the north) with groundwater quality more representative of conditions downgradient of the former CCR unit (see the *Comprehensive Groundwater Investigation Report* (Geosyntec 2020b) for more details about the installation of the additional background monitoring wells). The TDS ranged from 3,760 to 6,350 mg/L in the additional background monitoring wells during July 2020. Although this range is generally lower than the range observed in groundwater monitoring wells downgradient of the former CCR unit, it is higher than the range in the existing background monitoring wells, APMW-11 and APMW-12.

In addition to differences in salinity, differences in dissolved oxygen (DO) and oxidation reduction potential (ORP) are observed between groundwater in existing background monitoring wells and downgradient monitoring wells (i.e., APMW-1R through APMW-

6R and APMW-7 through APMW-10) (**Figure 3**). Generally, DO measurements are higher in the existing background monitoring wells, indicating a more aerobic geochemical environment, relative to downgradient and additional background monitoring wells. DO measurements in the additional background monitoring wells were similar to the downgradient monitoring wells. Oxidation-reduction potential measurements are generally lower in groundwater samples from downgradient monitoring wells and additional background monitoring wells than existing background monitoring wells. This suggests more reducing conditions are present in the downgradient and additional background monitoring wells relative to the existing background monitoring wells. In general, pH ranges from 6 to 7 standard units (S.U.) in all wells; however, the measured specific conductivity is at least an order of magnitude higher in groundwater from the downgradient and additional background monitoring wells compared to background wells, APMW-11 and APMW-12, consistent with the observed salinity.

These groundwater quality geochemical differences, in addition to differences in major ion content (e.g., sulfate), control the mobility of many groundwater constituents leading to differences in groundwater conditions between locations upgradient of the former CCR unit compared to downgradient.

2.2 Radium Overview

Radium is an alkaline earth metal that exists in nature in the +2 oxidation state (i.e., Ra^{2+}) like other alkaline earth metals such as barium (Ba^{2+}). Radium naturally occurs as several isotopes. Of the isotopes of radium, only two have half-lives greater than 15 days and promulgated standards: ^{226}Ra (1,600 years) and ^{228}Ra (5.75 years). Radium isotopes are derived from radioactive decay of uranium and thorium (i.e., radium parent radionuclides). Radioactive decay of uranium results in the formation of ^{226}Ra , while radioactive decay of thorium results in the formation of ^{228}Ra . During natural radioactive decay processes, charged particles including alpha and beta particles are emitted from the nucleus of an element. Sources of alpha activity include uranium, thorium, and ^{226}Ra while sources of beta activity include ^{228}Ra (Electric Power Research Institute [EPRI], 2008).

The abundance of radium isotopes in the environment depends on the isotope's half-life and the abundance of the isotope's parent radionuclide. Although ^{228}Ra has a relatively short half-life, USEPA uses the sum of the concentrations of ^{228}Ra and ^{226}Ra for the combined radium maximum contaminant level (MCL) of 5 picocuries per liter (pCi/L)

(USEPA, 2015). For simplicity, this document refers to the combined concentrations of ^{228}Ra and ^{226}Ra as radium and the individual isotopes in standard isotopic notation. The CCR Rule adopts the higher of either the radium MCL or background levels as the radium GWPS; for this Site, 5 pCi/L is the GWPS.

Radium mobility is primarily influenced by precipitation-dissolution and adsorption-desorption reactions. Radium's solubility in groundwater is primarily controlled by the presence of competing ions (especially other alkaline earth cations, such as barium) and organic material (EPRI, 2019) and the groundwater's pH, ORP, and salinity (Sturchio, et al., 2001).

3.0 PARENT RADIONUCLIDES OBSERVED IN SOIL MATRIX

3.1 Soil Sampling and Analysis

Field activities were completed in April 2020 to evaluate the presence of naturally occurring sources of radium parent radionuclides in the soil matrix. For this evaluation, direct push technology (DPT) borings were advanced at the locations shown on **Figure 4** and continuous soil cores were collected at each DPT boring. Ten downgradient DPT borings (DPT-1 through DPT-10) were advanced adjacent to the ten downgradient CCR monitoring wells (APMW-1R through APMW-10) and three upgradient DPT borings (DPT-11 through DPT-13) were advanced in the vicinity of existing background wells APMW-11 and APMW-12. Boring logs for DPT points are included in **Appendix A**.

Four additional background wells (**Figure 2**) were installed at the Site in June 2020 (further details on installation included in the *Comprehensive Groundwater Investigation Report*; Geosyntec 2020b). During installation of the additional background monitoring wells, soil matrix samples were collected and analyzed for constituents to support this ASD.

Soil samples were collected from both the Unit 2 clay aquitard and Unit 3 sand aquifer in the DPT borings and additional background wells and submitted to TestAmerica for laboratory analysis under chain of custody protocols. The soil samples were analyzed for total concentrations of uranium and thorium, and other Appendix IV metals.

A summary of analytical results for uranium and thorium in the DPT samples are presented in **Table 1** and the analytical results from the additional background wells are presented in **Table 2**. Laboratory reports are compiled in **Appendix B**.

3.2 Uranium and Thorium in Soil Matrix

As detailed in Section 2.2, uranium and thorium are parent radionuclides that undergo radioactive decay to form ^{226}Ra and ^{228}Ra . Uranium and thorium were detected in soils both upgradient (in the vicinity of the existing background wells and soils from additional background wells) and downgradient of the former CCR unit at concentrations up to 2.27 milligrams per kilogram (mg/kg) and 6.37 mg/kg in samples DPT-11-SS U2 and DPT-13-SS U2. Uranium and thorium were widely detected (at frequencies of 88% and 100%) in 34 upgradient and downgradient soil samples collected from Units 2 and 3 during the DPT investigation and additional background well installation (**Table 1** and **Table 2**).

Detections of uranium and thorium in upgradient soil samples demonstrate the presence of naturally occurring sources of radium in the soil matrix.

Uranium and thorium detection frequencies were observed to be greater in the Unit 2 clay relative to the Unit 3 sands. In addition, Unit 2 uranium and thorium concentrations were greater than concentrations in the paired deeper Unit 3 locations. The observation of concentrated uranium and thorium in the Unit 2 clay indicates this well-documented lithologic layer can serve as a natural source of radium in the Unit 2 and Unit 3 soil matrices due to advective groundwater flow and molecular diffusion from Unit 2 across Plant Watson.

3.3 Soil Correlation between Parent Radionuclides and Radium

Soil matrix analytical results were evaluated for correlations between parent radionuclides (i.e., uranium and thorium) and daughter radionuclides (i.e., ²²⁶Ra and ²²⁸Ra) in soil. In its simplest form, a correlation between two variables is a measure of the relationship between the two variables. Correlations can be positive or negative. A positive correlation between a parent radionuclide measured in the soil matrix and its daughter radionuclide would suggest that the parent radionuclide is likely the source of the daughter radionuclide.

A coefficient of determination (R^2) can be calculated as a measure of the strength of the relationship between the two variables. An R^2 of 1, indicates a perfect positive relationship between the variables. An R^2 of 0, indicates no correlation or relationship exists between the variables. In general, $R^2 > 0.5$ indicates a moderate or higher positive correlation.¹ Correlations between parent radionuclides and corresponding daughter radium isotopes are presented in **Figure 5**. A moderate positive correlation ($R^2 = 0.53$) was observed between the parent radionuclide uranium and its daughter radionuclide ²²⁶Ra in the soil matrix. A similar moderate correlation ($R^2 = 0.59$) exists between the parent radionuclide thorium and its daughter radionuclide ²²⁸Ra. The positive correlations between parent and daughter radium isotopes indicate that uranium and thorium observed in the soil matrix are sources of radium in the soil matrix.

¹ The strength of a positive correlation based on R^2 can be generalized as follows (Hinkle et al., 2003): >0.9, very high positive correlation; 0.7 to 0.9, high positive correlation; 0.5 to 0.7, moderate positive correlation; 0.3 to 0.5, low positive correlation; and <0.3, negligible correlation.

4.0 RADIUM IN SOIL MATRIX RELEASED TO GROUNDWATER

4.1 Soil Sampling and Analysis

In addition to investigating the presence of parent radionuclides, the presence of radium in the soil matrix was also evaluated using samples collected during the April 2020 DPT investigation and June 2020 additional background well installation.

Soil samples collected from both the Unit 2 clay and Unit 3 aquifer in the 13 DPT borings and 4 additional background wells (**Figure 4**) were submitted to TestAmerica for laboratory analysis under chain of custody protocols. In addition to uranium and thorium discussed above, the soil samples were analyzed for ^{226}Ra , ^{228}Ra , combined radium, and other Appendix IV metals. A summary of analytical results for radium isotopes are presented in **Table 1 and Table 2**. Laboratory reports are compiled in **Appendix B**.

Similar to the investigation with parent radionuclides and radium in soils, the April 2020 DPT soil data was also analyzed for correlations between parent radionuclides in the soil matrix and radium isotopes in downgradient groundwater using data from the March 2020 sampling event.

4.2 Radium in Soil Matrix and Release to Groundwater

4.2.1 Radium in the Soil Matrix

As discussed in Section 2.2, radium results from the decay of parent radionuclides uranium and thorium. Radium was widely detected (at a frequency of 70%) in the 34 upgradient (in the vicinity of the existing background wells and soils from additional background wells) and downgradient soil samples at concentrations up to approximately 2 picocuries per gram (pCi/g). In addition, the individual isotopes of radium, ^{226}Ra and ^{228}Ra , were detected at frequencies of 76% and 50% in the 34 upgradient and downgradient soil samples at concentrations up to approximately 1 pCi/g each. The presence of radium at upgradient locations demonstrates that radium occurs naturally in the soil matrix.

As observed with uranium and thorium, radium concentrations were greater in the Unit 2 samples than the Unit 3 samples; 81% of the samples from Unit 2 had higher radium concentrations than the concentrations in the paired deeper Unit 3 locations. The observation of concentrated radium in the Unit 2 clay indicates this well-documented lithologic layer can serve as a source of radium across Plant Watson. The interaction of

Unit 3 groundwater with the Unit 2 soil matrix at the Unit 2/Unit 3 interface combined with advective groundwater flow and molecular diffusion out of Unit 2 contributes to the observed radium concentrations in Unit 3.

4.2.2 Radium in the Soil Matrix Released to Downgradient Groundwater

4.2.2.1 Soil / Groundwater Correlation between Parent Radionuclides and Radium

Correlation coefficients between parent radionuclides (uranium and thorium) in downgradient soil and daughter radium isotopes in downgradient groundwater were calculated to evaluate the potential for parent radionuclides in soil to serve as the source of the radium isotopes observed in groundwater. A positive correlation between uranium in the soil matrix and ^{226}Ra in groundwater would suggest that the uranium in soil is the likely source of the ^{226}Ra in groundwater. Similarly, a positive correlation between thorium in the soil matrix and ^{228}Ra in groundwater would suggest that the thorium in soil is the likely source of the ^{228}Ra in groundwater. The interpretation of the strength of a positive correlation using the correlation coefficient is consistent with the interpretation presented in Section 3.3.

Soil samples from the DPT investigation (i.e., DPT-1 through DPT-10) and collocated groundwater samples (i.e., APMW-1R through APMW-10 collected in March 2020) collected downgradient of the former CCR unit exhibited a high positive correlation ($R^2 = 0.74$) between the parent radionuclide thorium in soil and its daughter radionuclide ^{228}Ra in groundwater (**Figure 6**). This observation demonstrates that naturally occurring thorium in soil is the likely source of ^{228}Ra in groundwater.

The correlation between parent radionuclide uranium in soil and its daughter radionuclide ^{226}Ra in groundwater was also evaluated. As shown on **Figure 6**, uranium and ^{226}Ra have a negligible correlation ($R^2 = 0.0019$). Rather, the concentrations of ^{226}Ra in downgradient groundwater (especially in APMW-1R and APMW-2) are greater than would be expected if uranium decay in the soil matrix was the sole source of ^{226}Ra in groundwater. This observation suggests that, while natural uranium decay in the soil matrix is a contributing source of ^{226}Ra to downgradient groundwater, another source of ^{226}Ra accounts for the ^{226}Ra concentrations observed in downgradient groundwater.

Based on the mineralogy observed in the soil matrix and presented in the *Barium Alternate Source Demonstration* (Geosyntec, 2020a), another source of ^{226}Ra is likely the substitution of ^{226}Ra into sulfate minerals including barite. Due to their similar ionic size

and their chemical behavior, ^{226}Ra can preferentially (relative to ^{228}Ra) substitute for barium in the mineral barite (barium sulfate) (USEPA, 2004; IAEA, 2014). Ra-substitute barite is referred to as Ra-barite herein. As documented in the *Barium Alternate Source Demonstration* (Geosyntec, 2020a), barite serves as a source of barium to groundwater. In addition, barite can also serve as a source of substituted ^{226}Ra to groundwater (Phillips et al., 2001).

Based on Site-specific geochemical conditions, a geochemical model and supporting analyses presented in the *Barium Alternate Source Demonstration* (Geosyntec, 2020a) indicated a strong positive correlation ($R^2 = 0.98$) between barium concentrations in Unit 3 groundwater to simulated concentrations of barium released from dissolution of naturally occurring barite (**Figure 7**). Similarly, a strong positive correlation ($R^2 = 0.99$) was observed between barium concentrations and ^{226}Ra concentrations in Unit 3 groundwater downgradient of the former CCR unit (**Figure 8**). This suggests that barite is a source of barium and radium observed in downgradient monitoring wells. This evaluation supports that naturally occurring barite contributes ^{226}Ra to groundwater at the Site.

4.2.2.2 *Radium Release Due to Salinity*

A potential mechanism for release of naturally occurring radium that has been well documented in the literature involves desorption of radium from soils when in contact with groundwater with salinity (Hughes, 2016) and/or proxies for salinity like high TDS (IAEA, 2014; Sturchio et al., 2001; USEPA, 2004) or chloride (Miller and Sutcliffe, 1985). As indicated in Section 2.1.2, the groundwater geochemical conditions beneath the former CCR unit resemble the adjacent saline/brackish surface water with naturally occurring high concentrations of TDS. In fact, each downgradient monitoring well with a radium SSL has statically ($\alpha > 99\%$) higher concentrations of TDS (i.e., a surrogate for salinity) than upgradient locations (SCS, 2020). These observations indicate that the downgradient groundwater geochemical environment likely promote the release of naturally occurring radium. To evaluate this mechanism at Plant Watson, a leaching investigation was conducted.

The leach testing was performed using samples of background soils collected from an area characterized by a fresh groundwater environment where radium is detected in the soils but not appreciably detected in groundwater. The soils were leached using saline downgradient groundwater from the Site. The leaching procedure was completed by TestAmerica and was developed based on USEPA's Leaching Environmental

Assessment Framework (LEAF) (USEPA, 2017) but modified to evaluate the potential for radium dissolution from soils in the presence of saline groundwater. The leach test was completed with soil matrix collected from upgradient soil sample location DPT-11 and groundwater collected from downgradient monitoring well APMW-5. Groundwater from APMW-5 was selected because it had a combination of relatively low radium (2.82 pCi/L), high total dissolved solids (TDS; 15,000 mg/L), and high chloride (8,900 mg/L) during the March 2020 sampling event. The high TDS (i.e., surrogate for salinity) is representative of the unique groundwater geochemistry observed in groundwater downgradient of the former CCR unit.

To perform the leach test, Site groundwater and soil matrix were combined in glass containers and placed in a rotating device to turn end-over-end for seven days to simulate groundwater flowing through aquifer materials. The rotating device was set to turn approximately 30 times per minute at ambient temperature. After seven days, the contents of the containers were allowed to settle for 48 hours. Following the 48-hour settling period, approximately 2 liters of the supernatant liquid (i.e., the leachate) was collected and filtered using a 0.45-micron filter. The leachate sample was then placed in appropriate analytical laboratory containers and submitted for analysis. Groundwater from APMW-5 and the leachate sample were analyzed for uranium, thorium, ²²⁶Ra, and ²²⁸Ra. Analytical results are presented in **Table 3** and laboratory reports are compiled in **Appendix B**.

The leach test indicated that the geochemical conditions (i.e., primarily the elevated salinity) in groundwater downgradient of the former CCR unit leaches radium, resulting in release from soil to groundwater. Results from the leaching test are viewed as conservative (i.e., the increase in radium concentration is biased low) since leaching was conducted under aerobic/oxidizing conditions and radium is most mobile under anaerobic reducing conditions (USEPA, 2000b) similar to groundwater downgradient of the former CCR unit.

Release of radium from the upgradient soil matrix in contact with upgradient site groundwater is not observed, as evidenced by the low levels of radium in existing background monitoring wells APMW-11 and APMW-12. However, the increased radium concentration (80% greater than the APMW-5 groundwater) in laboratory leachate generated by mixing upgradient soil matrix with downgradient Site groundwater indicates that there is a radium release mechanism in downgradient Site groundwater that does not exist in upgradient Site groundwater (**Table 3**).

In addition to the release of radium from the soil matrix due to elevated salinity downgradient of the former CCR unit, the geochemical model presented in the *Barium Alternate Source Demonstration* (Geosyntec, 2020a) predicted that elevated salinity results in increased barium dissolution from barite. This is consistent with elevated salinity leading to an increase in barite solubility as presented in the literature (API, 1995). The influence of salinity on barite solubility can readily be extended to an increase in the solubility of Ra-barite, discussed in Section 4.2.2.1. As such, elevated levels of naturally occurring TDS and other components contributing to salinity may promote release of ²²⁶Ra from Ra-barite in the soil matrix.

As shown by the leaching test, elevated salinity representative of downgradient groundwater can increase leaching of naturally occurring radium from background soils that are in a relatively low salinity environment. In addition, increased Ra-barite dissolution as a result of elevated salinity can also contribute to the release of ²²⁶Ra to groundwater. The combination of these release mechanisms likely results in the elevated radium concentrations observed in groundwater downgradient of the former CCR unit.

4.2.2.3 Radium Release Under Reducing Conditions

Literature also indicates that radium is readily released under reducing conditions (USEPA, 2000a), similar to those observed downgradient but not upgradient of the former CCR unit. For example, in March 2020, upgradient monitoring wells, APMW-11 and APMW-12, had positive ORPs (6.4 and 5.7 millivolts [mV], respectively), whereas each monitoring well downgradient of the former CCR unit with a radium SSL had a lower ORP (as low as -253 mV) (**Figure 3**). This indicates that the downgradient geochemical environment is more reducing than the upgradient geochemical environment. Per USEPA (2000a), radium is more mobile under these reducing conditions and this observation is consistent with higher radium concentrations in downgradient monitoring wells relative to upgradient monitoring wells.

This observation indicates that the downgradient groundwater geochemical environment which is characterized by reducing conditions is more conducive for the release of naturally occurring radium from the soil matrix to groundwater than the geochemical environment upgradient of the former CCR unit, which is oxidizing.

4.2.2.4 Radium Release Under Low Sulfate Conditions

Another geochemical mechanism for ^{226}Ra release is due to low sulfate concentrations in groundwater (API, 1995), like that observed in select downgradient monitoring wells (e.g., APMW-1R and APMW-2) where ^{226}Ra groundwater concentrations are highest. API (1995) indicates that low sulfate concentrations can result in increased ^{226}Ra dissolution from Ra-barite. This is consistent with the predictions of the geochemical model presented in the *Barium Alternate Source Demonstration* (Geosyntec, 2020a), where low concentrations of sulfate in groundwater resulted in increased barium (and by extension ^{226}Ra) dissolution from Ra-barite in the soil matrix. This is further supported by data from the downgradient monitoring wells. The two wells that have the highest barium concentrations in downgradient groundwater (APMW-1R and APMW-2) also contain the lowest sulfate concentrations and are the only wells where the concentration of ^{226}Ra exceeds that of ^{228}Ra .

These observations indicate that the downgradient groundwater geochemical environment characterized by low sulfate concentrations at select wells is conducive to the release of naturally occurring radium from the soil matrix to groundwater.

5.0 SPATIAL EVALUATION OF RADIONUCLIDES IN SOIL MATRIX

5.1 Soil Analysis

In conjunction with radionuclides observed in the soil matrix, spatial evaluation of the radionuclide data can provide insight into differences in radionuclide levels observed in soil and groundwater upgradient versus downgradient of the former CCR unit. This was completed to support the conclusion that a naturally occurring source of radium is being released to groundwater due to the unique geochemistry encountered in downgradient monitoring wells.

In addition to observing the presence of radionuclides in the soil matrix at the DPT and additional monitoring well locations, a spatial evaluation of the radionuclide levels in upgradient versus downgradient locations was completed. For this analysis, upgradient and downgradient soil data collected from the 13 DPT borings installed in April 2020 and the four additional background monitoring wells installed in June 2020 were compared. Consistent or elevated levels of radionuclides in the upgradient soil matrix relative to the downgradient soil matrix would suggest radionuclides are naturally occurring since input from the former CCR unit could not occur at the upgradient locations.

As previous sections have discussed, increased salinity in groundwater is the primary mechanism by which radium in the soil matrix is released to groundwater. An evaluation of groundwater concentrations of radium in the existing background wells, downgradient monitoring wells, and the additional background wells provides a further line of evidence supporting this release mechanism.

5.2 Uranium and Thorium in Upgradient Soil Matrix

Parent radionuclides uranium and thorium (the abundance of which directly impacts the abundance of daughter radium isotopes in soil) were generally detected at similar or slightly higher concentrations in upgradient soils than in downgradient soils (**Table 1** and **Figure 9**). The upgradient DPT and additional background well locations are outside the influence of the former CCR unit, therefore the presence of parent radionuclides at these locations must be the result of a natural source in the soil matrix. The concentrations of uranium and thorium observed in the upgradient soil matrix further demonstrates the presence of naturally occurring sources of radium at Plant Watson.

5.3 Radium in Upgradient Soil Matrix

Similar to the distribution of uranium and thorium, radium concentrations were generally consistent in upgradient and downgradient soil samples (**Table 1** and **Figure 9**). Radium was detected in soil at similar to slightly higher concentrations, up to 2.04 pCi/g, upgradient of the former CCR unit, relative to a maximum concentration of 1.55 pCi/g downgradient of the former CCR unit. The presence of radium in soil samples upgradient of the former CCR unit (i.e., adjacent to the existing background wells) demonstrates the presence of naturally occurring radium at the site.

5.4 Radium Release from Soil Matrix to Groundwater

Upgradient soils in DPT 11 through DPT 13 were observed to contain higher levels of parent radionuclides and radium. However, groundwater adjacent to these soils in APMW-11 and APMW-12 did not contain appreciable radium. This suggests that the geochemical environment encountered in these upgradient locations is not favorable for radium release. Review of the geochemical environment indicates that APMW-11 and APMW-12 are located in a freshwater environment, which is in contrast to the naturally occurring saline/brackish environment in the downgradient monitoring wells. This supports the conclusion that the interaction of soils containing naturally occurring sources of radium with saline groundwater results in the release of radium to groundwater.

This conclusion is also supported by the soil and groundwater data obtained from the additional background wells. Four additional background wells were installed in the marsh geochemical environment in order to obtain background data from wells screened in groundwater with geochemical conditions similar to the geochemical environment downgradient of the former CCR unit. Analytical results from groundwater samples collected from these additional background monitoring wells are presented in **Table 2**. Relative to existing background wells (i.e., APMW-11 and APMW-12 with TDS of approximately 100 mg/L), the additional background wells have TDS concentrations ranging from 3,700 to 6,300 mg/L. Similarly, while the existing background wells are installed in an oxidizing environment (with an ORP range of 5.7 to 6.4 mV in March 2020), the additional background wells are installed in a reducing environment (with an ORP range of -264.9 to -173.4 mV in July 2020). The higher concentrations of TDS are indicative of saline or brackish groundwater geochemistry and the low ORP is indicative of a reducing geochemical environment in the additional background monitoring wells. Like the existing background wells, review of soil sample data collected when the additional background wells were installed (see Geosyntec, 2020b) indicates the presence

of naturally occurring uranium, thorium, and radium in the soil matrix. However, unlike groundwater in APMW-11 and APMW-12, concentrations of radium in groundwater in the additional background wells are up to 4.9 pCi/L, just below the GWPS of 5 pCi/L. The release of naturally occurring radium in the additional background wells serves as additional evidence for a radium release mechanism from soils due to saline groundwater in a reducing geochemical environment interacting with a soil matrix containing naturally occurring radium.

6.0 RADIUM IN ASH POREWATER

Ash porewater samples from the former CCR unit have lower concentrations of radium relative to downgradient groundwater samples from monitoring wells with radium SSLs. Statistical methods, as documented in this section, were employed to demonstrate that ash porewater from the former CCR unit cannot serve as the source of the radium SSLs observed in downgradient groundwater.

Radium concentrations in ash porewater samples collected in September 2019 ranged from 0.759 to 4.16 pCi/L. In contrast, radium concentrations in co-located samples from the underlying Unit 3 aquifer ranged from 4.37 to 6.37 pCi/L (**Table 4**).

The mean radium concentration in ash porewater was statistically lower than the mean radium concentration in the Unit 3 aquifer, as documented via a Welch's t-test (**Table 5**). Welch's t-test is used to evaluate if two datasets means are statistically different from one another, assuming each dataset is normally distributed, but that the variance between the datasets are not equal. The results of this statistical test indicate that, with 99% confidence, the mean radium concentration in the ash porewater is statistically lower than the mean radium concentration in the Unit 3 aquifer. As such, a release of porewater from the former CCR unit cannot account for the radium levels observed in groundwater downgradient of the former CCR unit. This observation supports the conclusion that radium in the Unit 2 soil matrix is released to Unit 3 groundwater through the combined processes of advective groundwater flow and molecular diffusion. Furthermore, the following naturally occurring radium release mechanisms observed at the Site likely contribute radium to downgradient groundwater: elevated groundwater salinity, a reducing groundwater geochemical environment, and/or low sulfate concentrations at select locations.

Radium concentration in ash porewater were below the GWPS of 5 pCi/L. To evaluate the likelihood that the mean radium concentration in ash porewater would be below the GWPS regardless of spatial location in the former CCR unit, a Student's t-test was performed. The Student's t-test assumes that the concentration of radium in ash porewater is normally distributed and that the ash and porewater are homogenous and in chemical equilibrium. These assumptions are supported by the fact that ash sluice water was: (i) distributed across the former CCR unit; (ii) was relatively consistent throughout the operational period of the former CCR unit; and (iii) has had many years to come into chemical equilibrium with the ash.

Results of the Student's t-test are presented in **Table 5** and indicate that, with 99% confidence, the mean radium concentration within in ash porewater is less than the GWPS. This indicates that based on the number of ash porewater samples (i.e., 15 samples including a duplicate) collected within the former CCR unit and the concentrations of total radium observed in those samples, the mean ash porewater radium concentration is less than 5 pCi/L with greater than 99% confidence. Hypothetically, if the ash porewater mean total radium concentration in the former CCR unit was equal to or greater than 5 pCi/L, then there would be less than a 1% probability of collecting 15 samples of ash porewater with a mean total radium concentration of less than 5 pCi/L. In addition, the 95% upper confidence limit (UCL95) of radium in ash porewater was calculated using ProUCL 5.1 (ProUCL; USEPA, 2015). ProUCL recommended using the 95% Chebyshev UCL, which estimated the UCL95 of radium in ash porewater to be approximately 4 pCi/L (i.e., below the GWPS of 5 pCi/L) (**Appendix C**).

These statistical observations support the conclusion that based on the observed radium concentration, ash porewater from the former CCR unit does not currently appear to be the source for radium SSLs in Unit 3.

7.0 CONCLUSIONS

This ASD demonstrates that naturally occurring sources of radium, and site-specific mechanisms, result in the radium SSLs observed in monitoring wells downgradient of the former CCR unit. Supporting conclusions include the following:

1. Uranium and thorium, radium's parent radionuclides, are naturally present in the soil matrix at Plant Watson.
 - a. Uranium and thorium are concentrated in a well-documented clay layer (Unit 2) that is observed across Plant Watson.
 - b. Soil sample analytical results indicate that uranium and thorium are naturally present in soils spatially upgradient and downgradient of the Site.
 - c. A positive correlation exists between parent and daughter radionuclides, indicating that uranium and thorium are naturally occurring sources of ^{226}Ra and ^{228}Ra , respectively, in the soil matrix.
2. Radium isotopes are observed in the soil matrix at Plant Watson and are released to groundwater due to unique geochemical conditions present in downgradient wells.
 - a. Levels of radium are concentrated in a well-documented clay layer (Unit 2) that is observed across Plant Watson.
 - b. Soil sample analytical results indicate that radium isotopes are present in both upgradient and downgradient soils at the Site. The presence of radium in upgradient locations demonstrates that radium occurs naturally in the soil matrix.
 - c. A positive correlation exists between thorium in the soil matrix and ^{228}Ra in groundwater, indicating that thorium is the likely source of ^{228}Ra in groundwater.
 - d. While naturally occurring uranium is contributing ^{226}Ra to downgradient groundwater (due to natural radioactive decay processes), naturally occurring uranium does not appear to account for all of the observed ^{226}Ra concentrations. Another natural source of ^{226}Ra (e.g., radium-substituted barite [barium sulfate]) is present in the soil matrix. This is readily apparent at APMW-1R and APMW-2 where the greatest concentrations of ^{226}Ra and barium in groundwater are encountered.
 - e. Literature indicates that elevated groundwater salinity and reducing conditions promotes the release of radium from soil matrices. Groundwater from monitoring wells with radium SSLs has elevated salinity (resembling the adjacent surface water which is naturally

- saline/brackish) and reducing conditions, making it conducive to radium release.
- f. A leaching test confirmed that radium from upgradient soil samples can be released in the presence of groundwater with elevated salinity. Therefore, the soil matrix serves as a naturally occurring source of radium to groundwater under the geochemical conditions encountered downgradient of the former CCR unit.
 - g. Geochemical modeling indicates that low concentrations of sulfate in groundwater can result in the release of ^{226}Ra from radium-substituted barite. The two downgradient monitoring wells (APMW-1R and APMW-2) with the lowest sulfate concentrations have the highest ^{226}Ra concentrations, which supports the conclusion that Ra-barite is a source of ^{226}Ra to groundwater.
3. The spatial distribution of radionuclides supports the conclusion that radionuclides occur naturally in the soil matrix at Plant Watson.
 - a. Soil sample analytical results indicate that levels of uranium, thorium, and radium in soil upgradient of the former CCR unit are similar or slightly greater than downgradient levels. These radionuclides are naturally present and sources of radium at Plant Watson.
 - b. Soil and groundwater sample results from the additional background well locations (APMW-13, APMW-14, APMW-15, and APMW-16), which are screened in a geochemical environment similar to downgradient monitoring wells (i.e., with an elevated salinity and reducing geochemical conditions), support the mechanism of radium release from upgradient soils due to interaction with saline groundwater. This is in contrast to the existing background monitoring wells APMW-11 and APMW-12 which were installed in a geochemical environment characterized by low salinity and oxidizing conditions, where radium concentrations were negligible. This further supports the conclusion that unique geochemical conditions downgradient of the former CCR unit, relative to upgradient, promote the release of radium to groundwater.
 4. Radium concentrations in ash porewater are significantly lower than radium concentrations in the underlying Unit 3 groundwater (statistically evaluated at the 99% confidence level). As such, a release of porewater from the former CCR unit cannot account for the radium levels observed in groundwater downgradient of the former CCR unit.

Collectively, this demonstration indicates that the downgradient geochemical environment is conducive for the release of naturally occurring radium to groundwater. Monitoring wells where SSLs are observed all possess geochemical conditions that promote the release of naturally occurring radium from the soil matrix to groundwater. Each location with a radium SSL is discussed below:

- The radium exceedance at APMW-1R is not the result of a release from the former CCR unit because:
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring sources of radium parent radionuclides (i.e., uranium and thorium) that result in the formation of naturally occurring radium in the soil matrix.
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring radium that can be released to groundwater due to geochemical conditions in downgradient monitoring wells that are not present in upgradient monitoring wells.
 - APMW-1R has an elevated TDS (4,500 mg/L), like the adjacent saline/brackish surface water, as compared to existing background wells (95-120 mg/L) and elevated TDS promotes release of radium to groundwater.
 - APMW-1R has a negative ORP (-131.6 mV) and reducing conditions are conducive to the release of radium to groundwater.
 - APMW-1R has relatively low sulfate concentrations (23 mg/L) and low sulfate concentrations promote the release of radium to groundwater.
- The radium exceedance at APMW-2 is not the result of a CCR release because:
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring sources of radium parent radionuclides (i.e., uranium and thorium) that result in the formation of naturally occurring radium in the soil matrix.
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring radium that can be released to groundwater

due to geochemical conditions in downgradient monitoring wells that are not present in upgradient monitoring wells.

- APMW-2 has an elevated TDS (4,400 mg/L), like the adjacent saline/brackish surface water, as compared to existing background wells (95-120 mg/L); elevated TDS promotes release of radium to groundwater.
- APMW-2 has a negative ORP (-23.8 mV) and reducing conditions are conducive to the release of radium to groundwater.
- APMW-2 has low sulfate concentrations (16 mg/L) and low sulfate concentrations promote release of radium to groundwater.
- The radium exceedance at APMW-3 is not the result of a CCR release because:
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring sources of radium parent radionuclides (i.e., uranium and thorium) that result in the formation of naturally occurring radium in the soil matrix.
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring radium that can be released to groundwater due to geochemical conditions in downgradient monitoring wells that are not present in upgradient monitoring wells.
 - APMW-3 has an elevated TDS (16,000 mg/L), like the adjacent saline/brackish surface water, as compared to existing background wells (95-120 mg/L) and elevated TDS promotes release of radium to groundwater.
 - APMW-3 has a negative ORP (-47.1 mV) and reducing conditions are conducive to the release of radium to groundwater.
- The radium exceedance at APMW-7 is not the result of a CCR release because:
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring sources of radium parent radionuclides (i.e., uranium and thorium) that result in the formation of naturally occurring radium in the soil matrix.

- The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring radium that can be released to groundwater due to geochemical conditions in downgradient monitoring wells that are not present in upgradient monitoring wells.
- APMW-7 has an elevated TDS (6,900 mg/L), like the adjacent saline/brackish surface water, as compared to existing background wells (95-120 mg/L) and elevated TDS promotes release of radium to groundwater.
- APMW-7 has a negative ORP (-253 mV) and reducing conditions are conducive to the release of radium to groundwater.
- The radium exceedance at APMW-9 is not the result of a CCR release because:
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring sources of radium parent radionuclides (i.e., uranium and thorium) that result in the formation of naturally occurring radium in the soil matrix.
 - The soil matrix upgradient and downgradient of the former CCR unit contains naturally occurring radium that can be released to groundwater due to geochemical conditions in downgradient monitoring wells that are not present in upgradient monitoring wells.
 - APMW-9 has an elevated TDS (5,400 mg/L), like the adjacent saline/brackish surface water, as compared to existing background wells (95-120 mg/L) and elevated TDS promotes release of radium to groundwater.
 - APMW-9 has a negative ORP (-1.03 mV) and reducing conditions are conducive to the release of radium to groundwater.

The combination of the above lines of evidence paired with the naturally occurring release mechanisms at each downgradient monitoring well with a radium SSL supports the conclusion that the radium SSLs observed in APMW-1R, APMW-2, APMW-3, APMW-7, and APMW-9 are from a source other than the former CCR unit.

Sample Count (n)	15	12	--
Sample Mean (x)	1.687	4.908	--
Standard Deviation (d)	1.153	1.028	--
Population Mean (u)	5	5	--
degrees of freedom (v)	14	11	24.662
t	-11.13	-0.31	-7.66
P(T<t)	1.00E-08	0.38	3.00E-08
Summary of Sample Means	99% confidence that combined radium is < GWPS	62% confidence that combined radium is < GWPS	99% confidence combined radium in ash is statistically lower than Unit 3

Notes:

1. Student's T calculation $t = \frac{x - u}{\frac{d}{\sqrt{n}}}$

2. Welch's T-test calculation $t = \frac{x_1 - x_2}{\sqrt{\frac{d_1^2}{n_1} + \frac{d_2^2}{n_2}}}$ $v = \frac{\left(\frac{d_1^2}{n_1} + \frac{d_2^2}{n_2}\right)^2}{\frac{d_1^4}{n_1^2(n_1 - 1)} + \frac{d_2^4}{n_2^2(n_2 - 1)}}$

3. Population mean is the groundwater protection standard (GWPS).

4. -- indicates these values are the same as those used in the Student's T test

5. CCR indicates coal combustion residuals

Comments

No additional comments.

Receipt

The samples were received on 9/20/2019 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.2° C and 1.7° C.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method(s) SM 5310C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 180-293568 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5).

Method(s) SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to confirmation of over-residue; both results are reported : 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5).

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5) and (180-95981-F-1 DU). The reporting limits (RLs) have been adjusted proportionately.

Method(s) SM 2320B: Reanalysis of the following samples were performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5)

Method(s) 351.2: The inter-parameter relationship does not meet acceptable criteria. Reanalysis was preformed, and the results confirmed.

2S-GS (180-95981-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-95981-1

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Southern Company
 Project/Site: CCR - Plant Watson

Job ID: 180-95981-1

Laboratory: Eurofins TestAmerica, Pittsburgh

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Comments

No additional comments.

Receipt

The samples were received on 9/20/2019 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.2° C and 1.7° C.

Receipt Exceptions

The containers provided for the following samples did not match the information listed on the Chain-of-Custody (COC): 2S-GS (180-95981-4) and DUP-01 (180-95981-5). No containers were provided for Oil and Grease, RAD, and Metals analysis. Analysis was cancelled for these tests until further instruction from the PM.

Information from PM on 10/9/2019:

Client couldn't fill all the containers before fed ex location closed; He sent what he had - he did have short holds collected hence the need to send that day; He then went back to the site to fill the sample containers he didn't fill; He called me in the morning to let me know that we would be missing some containers ; sample volumes for these missing parameters were sent with the next shipment.

RAD

Methods 903.0, 9315: Radium-226 prep batch 160-444126-

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5), (LCS 160-444126/1-A), (LCSD 160-444126/2-A) and (MB 160-444126/23-A)

Methods 904.0, 9320: Ra-228 Prep Batch 160-444140

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4), DUP-01 (180-95981-5), (LCS 160-444140/1-A), (LCSD 160-444140/2-A) and (MB 160-444140/23-A)

Method PrecSep_0: Radium 228 Prep Batch 160-444140:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-444126:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 1S-GS (180-95981-1), 1D-GS (180-95981-2), 2D-GS (180-95981-3), 2S-GS (180-95981-4) and DUP-01 (180-95981-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 180-95981-2

SDG Number: 1

Login Number: 95981

List Number: 1

Creator: Say, Thomas C

List Source: Eurofins TestAmerica, Pittsburgh

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/21/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.3° C, 1.6° C, 1.6° C, 3.4° C and 3.4° C.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Methods 6020, 6020A: The following sample was diluted due to the nature of the sample matrix: 4D-GS (180-96046-1). Elevated reporting limits (RLs) are provided.

Methods 6020, 6020A, 6020B: The ICSAB for batch 180-295148 was outside the acceptance limits for element: silicon. Elevated concentration of silicon within the stock reagent is suspected.

Method 6020: The low level continuing calibration verification (CCVL) associated with batch 180-295148 recovered above the upper control limit for sodium. The samples associated with this CCVL were 10x the RL for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 5310C: The RPD between the duplicate analyses was >10%. The difference between the results was less than the reporting limit; therefore the results are reported with this NCM.

4D-GS (180-96046-1)

Method SM 5310C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 180-294515. LCS/LCSD analyzed.

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), EB-01 (180-96046-6) and (180-96046-F-3 DU). The reporting limits (RLs) have been adjusted proportionately.

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: DUP-02 (180-96046-8). The reporting limits (RLs) have been adjusted proportionately.

Methods 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8).

Method SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to confirmation of over-residue; both results are reported : 4D-GS (180-96046-1) and 6D-GS (180-96046-5).

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 4D-GS (180-96046-1) and 6D-GS (180-96046-5). The reporting limits (RLs) have been adjusted proportionately.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Southern Company
 Project/Site: CCR - Plant Watson

Job ID: 180-96046-1

Laboratory: Eurofins TestAmerica, Pittsburgh

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Comments

No additional comments.

Receipt

The samples were received on 9/21/2019 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.3° C, 1.6° C, 1.6° C, 3.4° C and 3.4° C.

RAD

Method 9315: Radium-226 Prep Batch 160-444175

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7), DUP-02 (180-96046-8), (LCS 160-444175/2-B) and (MB 160-444175/22-A)

Method 9320: <Ra-228> Prep Batch 160-444178

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7), DUP-02 (180-96046-8), (LCS 160-444178/2-B) and (MB 160-444178/22-A)

Method PrecSep_0: Radium 228 Prep Batch 160-444175:

The following sample had cloudy discoloration:4D-GS (180-96046-1).

Method PrecSep_0: Radium 228 Prep Batch 160-444175:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision

Method PrecSep_0: Radium 228 Prep Batch 160-445767:

The following samples were prepared at a reduced aliquot due to limited volume for re-prep: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). Sample 180-96046-D-1 had light yellow discoloration.

Method PrecSep_0: Radium 228 Prep Batch 160-445767:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-444175:

The following sample had cloudy discoloration:4D-GS (180-96046-1).

Case Narrative

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96046-2

Job ID: 180-96046-2 (Continued)

Laboratory: Eurofins TestAmerica, Pittsburgh (Continued)

Method PrecSep-21: Radium 226 Prep Batch 160-444175:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-445766:

The following samples were prepared at a reduced aliquot due to limited volume for re-prep: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). Sample 180-96046-D-1 had light yellow discoloration.

Method PrecSep-21: Radium 226 Prep Batch 160-445766:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 4D-GS (180-96046-1), 4A-GS (180-96046-2), 3S-GS (180-96046-3), 4B-GS (180-96046-4), 6D-GS (180-96046-5), EB-01 (180-96046-6), FB-01 (180-96046-7) and DUP-02 (180-96046-8). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96046-2

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 180-96046-2

Login Number: 96046

List Source: Eurofins TestAmerica, Pittsburgh

List Number: 1

Creator: Say, Thomas C

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/24/2019 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.5° C, 1.6° C, 1.8° C and 4.0° C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): 5D-GS (180-96077-2). The container labels for the toc containers only list a sample id of 5D-GR, while the COC lists 5D-GS. The id on the COC was used.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 5310C: The RPD between the duplicate analyses was >10%. The difference between the results was less than the reporting limit; therefore the results are reported with this NCM.

7D-GS (180-96077-3)

Method SM 5310C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 180-294581. LCS/LCSD analyzed.

Methods 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7).

Method SM 2320B: Due to the high concentration of alkalinity, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 480-495181 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 351.2: The inter-parameter relationship does not meet acceptable criteria. Reanalysis was preformed, and the results confirmed.

6S-GS (180-96077-4), FB-02 (180-96077-5) and EB-02 (180-96077-6)

Method SM 2540C: Reanalysis of the following samples were performed outside of the analytical holding time due to first result was over-residue; both results are reported : 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7).

Method SM 2540C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7). The reporting limits (RLs) have been adjusted proportionately.

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.2 3.0 1.8 ir gun #1 ice
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	True

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	Seal present with no number.
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.5°C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/24/2019 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.5° C, 1.6° C, 1.8° C and 4.0° C.

RAD

Methods 903.0, 9315: Radium-226 Prep Batch 160-444304

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6), DUP-03 (180-96077-7), (LCS 160-444304/1-A), (LCSD 160-444304/2-A) and (MB 160-444304/21-A)

Methods 904.0, 9320: Radium-228 prep batch 160-444355

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5S-GS (180-96077-1), FB-02 (180-96077-5), EB-02 (180-96077-6), (LCS 160-444355/1-A), (LCSD 160-444355/2-A) and (MB 160-444355/21-A)

Methods 904.0, 9320: Radium-228 Prep Batch 160-444355

The following batch 444355 has a failing LCS at 134% and LCSD at 133% (limits are 75%-125%). The spikes are failing, the MB and RPD/RER is within limits. The sample activity is below the MDC's. The data has been reported with this narrative.

5S-GS (180-96077-1), FB-02 (180-96077-5), EB-02 (180-96077-6), (LCS 160-444355/1-A), (LCSD 160-444355/2-A) and (MB 160-444355/21-A)

Methods 904.0, 9320: Radium-228 Prep Batch 160-447604

The detection goal was not met for the following samples due to insufficient sample available for analysis: (MB 160-447604/20-A), (400-176940-A-14-E) and (400-176940-A-14-F DU). Samples were reduced for re-prep; see Prep NCM 160-181450. Analytical results are reported with the detection limit achieved.

Methods 904.0, 9320: Radium-228 prep batch 160-447604

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), DUP-03 (180-96077-7), (LCS 160-447604/1-A), (MB 160-447604/20-A), (400-176940-A-14-E) and (400-176940-A-14-F DU)

Case Narrative

Client: Southern Company
Project/Site: CCR - Plant Watson

Job ID: 180-96077-2
SDG: 1

Job ID: 180-96077-2 (Continued)

Laboratory: Eurofins TestAmerica, Pittsburgh (Continued)

Method PrecSep_0: Radium 228 Prep Batch 160-444355:

The following samples had light discoloration: 5S-GS (180-96077-1), 5D-GS (180-96077-2) and 7D-GS (180-96077-3).

Method PrecSep_0: Radium 228 Prep Batch 160-444355:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep_0: Radium 228 Prep Batch 160-447604:

Due to insufficient volume, the following samples were prepared a reduced aliquot for re-prep: 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4) and DUP-03 (180-96077-7). Samples 180-96077-D-3 and 180-96077-C-7 had yellow discoloration.

Method PrecSep-21: Radium 226 Prep Batch 160-444304:

The following samples had light yellow discoloration: 5D-GS (180-96077-2), 7D-GS (180-96077-3) and DUP-03 (180-96077-7).

Method PrecSep-21: Radium 226 Prep Batch 160-444304:

Insufficient sample volume was available to perform a sample duplicate for the following samples: 5S-GS (180-96077-1), 5D-GS (180-96077-2), 7D-GS (180-96077-3), 6S-GS (180-96077-4), FB-02 (180-96077-5), EB-02 (180-96077-6) and DUP-03 (180-96077-7). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Qualifiers

Rad

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative 180-105283-1

Receipt

The samples were received on 5/5/2020 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 2.2° C, 2.7° C, 3.5° C, 7.3° C and 8.3° C. No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RAD

Method 9310: Gross Alpha/Beta Prep Batch 160-473152. The gross alpha and gross beta detection goals were not met for the following samples due to a reduction of the sample size attributed to high residual mass. Analytical results are reported with the MDC achieved. DPT-11-SS RAU2 (SITE WATER) (180-105283-2) and APMW-5 (180-105283-26)

Method 9310: Gross Alpha/Beta Prep Batch 160-473152. The gross alpha detection goals were not met for the following samples due to a reduction of the sample size attributed to high residual mass. Analytical results are reported with the MDC achieved. (410-3210-S-1-E DU)

Method 9310: Gross Alpha-Beta Prep Batch 160-473152. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RAU2 (SITE WATER) (180-105283-2), APMW-5 (180-105283-26), (LCS 160-473152/2-A), (LCSB 160-473152/3-A), (MB 160-473152/1-A), (410-3210-S-1-A), (410-3210-S-1-E DU), (410-3210-S-1-B MS), (410-3210-S-1-C MSBT), (410-3210-S-1-D MSBTD) and (410-3210-O-1-B MSD)

Method 9315: Radium 226 Prep Batch:160-473104. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RAU2 (SITE WATER) (180-105283-2), APMW-5 (180-105283-26), (LCS 160-473104/1-A), (LCSD 160-473104/2-A), (MB 160-473104/25-A), (280-137307-A-6-A), (280-137307-A-6-B MS) and (280-137307-A-6-C MSD)

Method 9320: Radium-228 Prep Batch 160-473146. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RAU2 (SITE WATER) (180-105283-2), APMW-5 (180-105283-26), (LCS 160-473146/1-A), (LCSD 160-473146/2-A), (MB 160-473146/25-A), (280-137307-A-6-D), (280-137307-A-6-E MS) and (280-137307-A-6-F MSD)

Method PrecSep_0: Radium 228 Prep Batch 160-473146. Insufficient sample volume was available to perform a sample duplicate for the following samples: DPT-11-SS RAU2 (SITE WATER) (180-105283-2) and APMW-5 (180-105283-26). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-473104. Insufficient sample volume was available to perform a sample duplicate for the following samples: DPT-11-SS RAU2 (SITE WATER) (180-105283-2) and APMW-5 (180-105283-26). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Metals

Method 6020: Analytical batch 160-473606. The internal standard was outside QC limits in the CCV. All analytes were within acceptable limits, showing that there was no bias. Original results will be reported. (CCV 160-473606/51)

Project/Site: Plant Watson

Job ID: 180-105283-1

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

List Number: 1

Creator: Say, Thomas C

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria of <6°C (16.6°C, 17.0°C, 17.1°C, 17.9°C) and without any cooling agent (ice or otherwise): DPT-1-SS BA V2 (22-24) (400-187320-1), DPT-1-SS BA V3 (38-40) (400-187320-2), DPT-2-SS BA V2 (26-27) (400-187320-3), DPT-2-SS BA V3 (37-38) (400-187320-4), DPT-3-SS BA V2 (24-25) (400-187320-5), DPT-3-SS BA V3 (29-30) (400-187320-6), DPT-4-SS BA V2 (15-16) (400-187320-7), DPT-4-SS BA V3 (28-29) (400-187320-8), DPT-5-SS BA V2 (17-18) (400-187320-9), DPT-5-SS BA V3 (23-24) (400-187320-10), DPT-6-SS BA V2 (400-187320-11), DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS BA V3 (23-24) (400-187320-23), DPT-7-SS BA V2 (18-19) (400-187320-24), DPT-7-SS BA V3 (27-28) (400-187320-25), DPT-8-SS BA V2 (25-26) (400-187320-26), DPT-8-SS BA V3 (39-40) (400-187320-27), DPT-9-SS BA V2 (27-28) (400-187320-28), DPT-9-SS BA V3 (32-33) (400-187320-29), DPT-10-SS BA V2 (22-23) (400-187320-30), DPT-10-SS BA V3 (25-26) (400-187320-31), DUP-01 (400-187320-32), DUP-02 (400-187320-33), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), DUP-01 (400-187320-43) and DUP-02 (400-187320-44)

Department General Chemistry

Method 9034_Calc_AVS: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 180-314515 and analytical batch 180-314525 were outside control limits, low. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limit

Method 9034_Calc_AVS: The matrix spike duplicate (MSD) recoveries for preparation batch 180-314620 and analytical batch 180-314627 were outside control limits (low recoveries). Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limit

Client Sample Results

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-187320-1
SDG: Plant Watson

Client Sample ID: DUP-02
Date Collected: 04/21/20 00:00
Date Received: 04/28/20 08:49

Lab Sample ID: 400-187320-44
Matrix: Solid
Percent Solids: 78.8

Method: 6020 - Metals (ICP/MS)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Thorium	4.60		0.218	0.0980	mg/Kg	☼	05/08/20 10:12	05/08/20 22:34	2
Uranium	1.07		0.109	0.0435	mg/Kg	☼	05/08/20 10:12	05/08/20 22:34	2

Definitions/Glossary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-187320-1
SDG: Plant Watson

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/thesis/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-187320-2

RAD

Method 9315: Radium-226 Prep Batch 160-469589. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), (LCS 160-469589/1-A), (MB 160-469589/23-A) and (400-187320-A-12-B DU)

Method 9315: Ra-226 Prep Batch 160-469806. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-01 (400-187320-43), DUP-02 (400-187320-44), (LCS 160-469806/1-A), (MB 160-469806/11-A) and (400-187320-A-43-G DU)

Method 9320: Ra-228 Prep Batch 160-469648. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-1-SS RA V2 (400-187320-12), DPT-1-SS RA V3 (400-187320-13), DPT-2-SS RA V2 (400-187320-14), DPT-2-SS RA V3 (400-187320-15), DPT-3-SS RA V2 (400-187320-16), DPT-3-SS RA V3 (400-187320-17), DPT-4-SS RA V2 (400-187320-18), DPT-4-SS RA V3 (400-187320-19), DPT-5-SS RA V2 (400-187320-20), DPT-5-SS RA V3 (400-187320-21), DPT-6-SS RA V2 (400-187320-22), DPT-6-SS RA V3 (400-187320-34), DPT-7-SS RA V2 (400-187320-35), DPT-7-SS RA V3 (400-187320-36), DPT-8-SS RA V2 (400-187320-37), DPT-8-SS RA V3 (400-187320-38), DPT-9-SS RA V2 (400-187320-39), DPT-9-SS RA V3 (400-187320-40), DPT-10-SS RA V2 (400-187320-41), DPT-10-SS RA V3 (400-187320-42), (LCS 160-469648/1-A), (MB 160-469648/23-A) and (400-187320-A-12-D DU)

Method 9320: Radium-228 Prep Batch: 160-469808. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-01 (400-187320-43), DUP-02 (400-187320-44), (LCS 160-469808/1-A), (MB 160-469808/11-A) and (400-187320-A-43-I DU)

Method DPS-0: 400-187320-43 precipitated a very small pellet during into ingrowth. All samples will be re-prepped. DUP-01 (400-187320-43), DUP-02 (400-187320-44) and (400-187320-A-43 DU)

Method DPS-21: 400-187320-43 precipitated a very small pellet during into ingrowth. All samples will be re-prepped. DUP-01 (400-187320-43) and DUP-02 (400-187320-44)

Method Summary

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFI	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-187320-3

Metals

Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 160-471675 and analytical batch 160-471679 were outside control limits for lithium. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (400-187320-B-12-E MS) and (400-187320-B-12-F MSD)

Method 6020: preparation batch 160-471675 and analytical batch 160-471679 The MS (MSD) recovery and precision for antimony is outside the established QC limits. The MS/MSD is a multiple element spiking solution. All other elements in the spiking solution are either within acceptable criteria or have acceptable precision. This indicates potential matrix interference in the sample. Method performance is demonstrated by acceptable LCS recovery. No further action is required. (400-187320-B-12-E MS) and (400-187320-B-12-F MSD)

Method 6020: preparation batch 160-471675 and 160-471676 and analytical batch 160-471679 Due to linear range check (LRC) failures, the linear range for arsenic (200ppb) and molybdenum (100ppb) has been lowered to the concentration of the highest calibration standard. The LCS and MS/MSD were above the linear range, but were within acceptable recovery limits. (LCSSRM 160-471676/3-A), (400-187320-B-12-E MS), (400-187320-B-12-F MSD), (400-187320-A-43-O MS) and (400-187320-A-43-P MSD)

Client requested App III metals list added.

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

List Number: 1

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6°C, 2.8°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Case Narrative

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-187407-1
SDG: Plant Watson

Job ID: 400-187407-1

Laboratory: Eurofins TestAmerica, Pensacola

Narrative

**Job Narrative
400-187407-1**

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria of <6°C (16.2°C), with no cooling agent present: DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5) and DPT-13-SS RA V3 (400-187407-6).

A solid 4oz jar container for the following sample was received broken: DPT-12-SS RA V3 (400-187407-4). The sample was transferred to a new container with minimal loss; sufficient sample is remaining for analysis.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Receipt Exceptions

A solid 4oz jar container for the following sample was received broken: DPT-12-SS RA V3 (400-187407-4). The sample was transferred to a new container with minimal loss; sufficient sample is remaining for analysis.

Gas Flow Proportional Counter

Method 9315_Ra226: Ra-226 Prep Batch 160-469806 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5), DPT-13-SS RA V3 (400-187407-6), (LCS 160-469806/1-A), (MB 160-469806/11-A), (400-187320-A-43-F) and (400-187320-A-43-G DU)

Method 9320_Ra228: Radium-228 Prep Batch: 160-469808 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DPT-11-SS RA V2 (400-187407-1), DPT-11-SS RA V3 (400-187407-2), DPT-12-SS RA V2 (400-187407-3), DPT-12-SS RA V3 (400-187407-4), DPT-13-SS RA V2 (400-187407-5), DPT-13-SS RA V3 (400-187407-6), (LCS 160-469808/1-A), (MB 160-469808/11-A), (400-187320-A-43-H) and (400-187320-A-43-I DU)

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Metals

Method 6020: preparation batch 160-471676 and analytical batch 160-471679 Due to linear range check (LRC) failures, the linear range for arsenic (200ppb) and molybdenum (100ppb) has been lowered to the concentration of the highest calibration standard. The LCS and MS/MSD were above the linear range, but were within acceptable recovery limits. (LCSSRM 160-471676/3-A), (400-187320-A-43-O MS) and (400-187320-A-43-P MSD)

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Creator: Perez, Trina M

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C, 0.4°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-189739-1

RAD

Method 9320: Radium-228 Prep Batch 160-474969. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. APMW-13-U2-061620 (400-189739-1), APMW-13-U3-061620 (400-189739-2), APMW-14-U2-061620 (400-189739-3), APMW-14-U3-061620 (400-189739-4), APMW-15-U2-061720 (400-189739-5), APMW-15-U3-061720 (400-189739-6), APMW-16-U2-061720 (400-189739-7), APMW-16-U3-061720 (400-189739-8), (LCS 160-474969/1-A), (MB 160-474969/11-A) and (400-189739-A-1-I DU)

Method DPS-0: Radium 228 Prep Batch 160-474969. The following samples could not be thoroughly homogenized before sub-sampling was performed due to sample matrix: APMW-13-U2-061620 (400-189739-1), APMW-13-U3-061620 (400-189739-2), APMW-14-U3-061620 (400-189739-4), APMW-15-U3-061720 (400-189739-6), APMW-16-U2-061720 (400-189739-7), APMW-16-U3-061720 (400-189739-8) and (400-189739-A-1-E DU). The samples contained rocks of varying sizes.

Method DPS-21: Radium 226 Prep Batch 160-474968. The following samples could not be thoroughly homogenized before sub-sampling was performed due to sample matrix: APMW-13-U2-061620 (400-189739-1), APMW-13-U3-061620 (400-189739-2), APMW-14-U3-061620 (400-189739-4), APMW-15-U3-061720 (400-189739-6), APMW-16-U2-061720 (400-189739-7) and APMW-16-U3-061720 (400-189739-8). The samples contained rocks of varying sizes.

Definitions/Glossary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-189739-1
SDG: Plant Watson Background Wells

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.1°C IR-9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative 400-191180-1

Metals

Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 400-497609 and analytical batch 400-498115 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6020: The method blank for preparation batch 400-497609 and analytical batch 400-498263 contained Arsenic above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6020: The following samples were diluted due to the nature of the sample matrix: APMW-13 (400-191180-1), APMW-14 (400-191180-2) and APMW-15 (400-191180-3). Elevated reporting limits (RLs) are provided.

General Chemistry

Method SM 4500 Cl- E: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-498073 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 4500 Cl- E: The following sample was diluted to bring the concentration of target analytes within the calibration range: APMW-15 (400-191180-3). Elevated reporting limits (RLs) are provided.

Method SM 4500 SO4 E: The method blank for analytical batch 400-498922 contained Sulfate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method SM 4500 SO4 E: The following samples were diluted to bring the concentration of target analytes within the calibration range: APMW-14 (400-191180-2), (400-191209-G-9), (400-191209-G-9 MS) and (400-191209-G-9 MSD). Elevated reporting limits (RLs) are provided.

Method SM 4500 SO4 E: Due to the concentration of sulfates in the parent sample the MS/MSD was diluted after the spike. The spike amount was adjusted by the dilution factor. (400-191209-G-9 MS) and (400-191209-G-9 MSD)

Definitions/Glossary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-191180-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
♠	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Login Number: 191180

List Source: Eurofins TestAmerica, Pensacola

List Number: 1

Creator: Hinrichsen, Megan E

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Accreditation/Certification Summary

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-191180-2

RAD

Method 9315: Radium-226 prep batch 160-477711. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. APMW-13 (400-191180-1), APMW-14 (400-191180-2), APMW-15 (400-191180-3), (LCS 160-477711/1-A), (LCSD 160-477711/2-A) and (MB 160-477711/16-A)

Method 9320: Radium-228 prep batch 160-477714. The following sample did not meet the requested limit (RL) due to the reduced volume and low carrier recovery due to the presence of matrix interferences (see prep NCM 160-200271): APMW-15 (400-191180-3). The data have been reported with this narrative.

Method 9320: Radium-228 prep batch 160-477714. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. APMW-13 (400-191180-1), APMW-14 (400-191180-2), APMW-15 (400-191180-3), (LCS 160-477714/1-A), (LCSD 160-477714/2-A) and (MB 160-477714/16-A)

Method PrecSep_0: Radium 228 Prep Batch 160-477714. Samples 400-191180-1 and 3 were reduced due to yellow discoloration: APMW-13 (400-191180-1) and APMW-15 (400-191180-3) A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep_0: Radium 228 Prep Batch 160-477714. Insufficient sample volume was available to perform a sample duplicate for the following samples: APMW-14 (400-191180-2). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-477711. Samples 400-191180-1 and 3 were reduced due to yellow discoloration: APMW-13 (400-191180-1) and APMW-15 (400-191180-3) A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-21: Radium 226 Prep Batch 160-477711. Insufficient sample volume was available to perform a sample duplicate for the following samples: APMW-14 (400-191180-2). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Definitions/Glossary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-191180-2

Qualifiers

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.0°C IR-8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-191553-1

Metals

Method 6020: The method blank for preparation batch 400-498629 and analytical batch 400-498829 contained Beryllium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6020: The continuing calibration verification (CCV) associated with batch 400-498829 recovered above the upper control limit for Boron. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (MB 400-498629/1-A ^5).

Method 6020: The continuing calibration verification (CCV) associated with batch 400-498962 recovered above the upper control limit for Selenium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 400-498962/42).

Method 6020: The ICV for batch 400-498962 passed recovery/accuracy criteria which serves the ICV purpose of verifying the calibration standards. The replicate RSD for the elements were outside of the criteria for standards but within the criteria for field samples. Data has therefore been reported and narrated accordingly. (ICV 400-498962/13)

Method 6020: CRI recovery outside the SOP's criteria for Calcium (156%). The samples are 10x the CRI; therefore data is report. APMW-16 (400-191553-1) and DUP-01 (400-191553-5)

Method 6020: The ICV for batch 400-499116 passed recovery/accuracy criteria which serves the ICV purpose of verifying the calibration standards. The replicate RSD for the elements were outside of the criteria for standards but within the criteria for field samples. Data has therefore been reported and narrated accordingly. (ICV 400-499116/13)

General Chemistry

Method SM 2540C: The sample duplicate (DUP) precision for analytical batch 400-499080 was outside control limits. Sample non-homogeneity is suspected.

Method SM 4500 Cl- E: The following samples were diluted to bring the concentration of target analytes within the calibration range: APMW-16 (400-191553-1) and DUP-01 (400-191553-5). Elevated reporting limits (RLs) are provided.

Method SM 4500 SO4 E: The method blank for analytical batch 400-499801 contained Sulfate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method SM 4500 SO4 E: The following samples were diluted to bring the concentration of target analytes within the calibration range: APMW-16 (400-191553-1) and DUP-01 (400-191553-5). Elevated reporting limits (RLs) are provided.

Method SM 4500 SO4 E: The method blank for analytical batch 400-499824 contained Sulfate, Dissolved above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Qualifiers

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

List Number: 1

Creator: Whitley, Adrian

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	1325849
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.6, 4.1°C, IR9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Accreditation/Certification Summary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-191553-1

Laboratory: Eurofins TestAmerica, Pensacola

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 400-191553-2

RAD

Method 9315: Radium-226 prep batch 160-478597. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. APMW-16 (400-191553-1), APMW-5D (400-191553-2), FB-02 (400-191553-3), EB-02 (400-191553-4), DUP-01 (400-191553-5), APMW-5D (400-191553-6), (LCS 160-478597/1-A), (MB 160-478597/24-A), (400-191643-A-1-A), (400-191643-A-1-B MS) and (400-191643-A-1-C MSD)

Method 9320: Radium-228 Prep Batch 160-478599. The radium-228 detection goal was not met for the following sample due to the presence of matrix interferences: APMW-5D (400-191553-2). Analytical results are reported with the detection limit achieved.

Method 9320: Radium-228 Prep Batch 160-478599. Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. APMW-16 (400-191553-1), APMW-5D (400-191553-2), FB-02 (400-191553-3), EB-02 (400-191553-4), DUP-01 (400-191553-5), APMW-5D (400-191553-6), (LCS 160-478599/1-A), (MB 160-478599/24-A), (400-191643-A-1-D), (400-191643-A-1-E MS) and (400-191643-A-1-F MSD)

Method PrecSep_0: Radium 228 Prep Batch 160-478599. The following samples were prepared at a reduced aliquot due to discoloration and cloudy appearance: APMW-16 (400-191553-1), APMW-5D (400-191553-2) and DUP-01 (400-191553-5). Samples 400-191553-1 and 400-191533-5 have a yellow discoloration and sample 400-191553-2 has a cloudy appearance.

Method PrecSep-21: Radium 226 Prep Batch 160-478597. The following samples were prepared at a reduced aliquot due to discoloration and cloudy appearance: APMW-16 (400-191553-1), APMW-5D (400-191553-2) and DUP-01 (400-191553-5). Samples 400-191553-1 and 400-191533-5 have a yellow discoloration and sample 400-191553-2 has a cloudy appearance.

Definitions/Glossary

Client: Southern Company
Project/Site: Plant Watson

Job ID: 400-191553-2

Qualifiers

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	1325849
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.6, 4.1°C, IR9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

APPENDIX C

ProUCL Output

	A	B	C	D	E	F	G	H	I	J	K	L
1	UCL Statistics for Uncensored Full Data Sets											
2												
3	User Selected Options											
4	Date/Time of Computation		ProUCL 5.18/3/2020 10:34:07 AM									
5	From File		Interior Well Data ProUCL.xls									
6	Full Precision		OFF									
7	Confidence Coefficient		95%									
8	Number of Bootstrap Operations		2000									
9												
10												
11	Total Radium (Ash)											
12												
13	General Statistics											
14	Total Number of Observations				7		Number of Distinct Observations				7	
15							Number of Missing Observations				0	
16	Minimum				0.759		Mean				1.711	
17	Maximum				4.16		Median				0.96	
18	SD				1.401		Std. Error of Mean				0.529	
19	Coefficient of Variation				0.819		Skewness				1.339	
20												
21	Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use											
22	guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.											
23	For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).											
24	Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.1											
25												
26	Normal GOF Test											
27	Shapiro Wilk Test Statistic				0.716		Shapiro Wilk GOF Test					
28	5% Shapiro Wilk Critical Value				0.803		Data Not Normal at 5% Significance Level					
29	Lilliefors Test Statistic				0.38		Lilliefors GOF Test					
30	5% Lilliefors Critical Value				0.304		Data Not Normal at 5% Significance Level					
31	Data Not Normal at 5% Significance Level											
32												
33	Assuming Normal Distribution											
34	95% Normal UCL						95% UCLs (Adjusted for Skewness)					
35	95% Student's-t UCL				2.74		95% Adjusted-CLT UCL (Chen-1995)				2.868	
36							95% Modified-t UCL (Johnson-1978)				2.784	
37												
38	Gamma GOF Test											
39	A-D Test Statistic				0.95		Anderson-Darling Gamma GOF Test					
40	5% A-D Critical Value				0.714		Data Not Gamma Distributed at 5% Significance Level					
41	K-S Test Statistic				0.359		Kolmogorov-Smirnov Gamma GOF Test					
42	5% K-S Critical Value				0.315		Data Not Gamma Distributed at 5% Significance Level					
43	Data Not Gamma Distributed at 5% Significance Level											
44												
45	Gamma Statistics											
46	k hat (MLE)				2.235		k star (bias corrected MLE)				1.373	
47	Theta hat (MLE)				0.765		Theta star (bias corrected MLE)				1.246	
48	nu hat (MLE)				31.3		nu star (bias corrected)				19.22	
49	MLE Mean (bias corrected)				1.711		MLE Sd (bias corrected)				1.46	
50							Approximate Chi Square Value (0.05)				10.28	
51	Adjusted Level of Significance				0.0158		Adjusted Chi Square Value				8.376	
52												
53	Assuming Gamma Distribution											

	A	B	C	D	E	F	G	H	I	J	K	L
54	95% Approximate Gamma UCL (use when n>=50))					3.2	95% Adjusted Gamma UCL (use when n<50)					3.926
55												
56	Lognormal GOF Test											
57	Shapiro Wilk Test Statistic					0.775	Shapiro Wilk Lognormal GOF Test					
58	5% Shapiro Wilk Critical Value					0.803	Data Not Lognormal at 5% Significance Level					
59	Lilliefors Test Statistic					0.322	Lilliefors Lognormal GOF Test					
60	5% Lilliefors Critical Value					0.304	Data Not Lognormal at 5% Significance Level					
61	Data Not Lognormal at 5% Significance Level											
62												
63	Lognormal Statistics											
64	Minimum of Logged Data					-0.276	Mean of logged Data					0.297
65	Maximum of Logged Data					1.426	SD of logged Data					0.705
66												
67	Assuming Lognormal Distribution											
68	95% H-UCL					3.989	90% Chebyshev (MVUE) UCL					2.988
69	95% Chebyshev (MVUE) UCL					3.591	97.5% Chebyshev (MVUE) UCL					4.428
70	99% Chebyshev (MVUE) UCL					6.073						
71												
72	Nonparametric Distribution Free UCL Statistics											
73	Data do not follow a Discernible Distribution (0.05)											
74												
75	Nonparametric Distribution Free UCLs											
76	95% CLT UCL					2.582	95% Jackknife UCL					2.74
77	95% Standard Bootstrap UCL					2.526	95% Bootstrap-t UCL					10.18
78	95% Hall's Bootstrap UCL					10.08	95% Percentile Bootstrap UCL					2.58
79	95% BCA Bootstrap UCL					2.73						
80	90% Chebyshev(Mean, Sd) UCL					3.299	95% Chebyshev(Mean, Sd) UCL					4.018
81	97.5% Chebyshev(Mean, Sd) UCL					5.017	99% Chebyshev(Mean, Sd) UCL					6.978
82												
83	Suggested UCL to Use											
84	95% Chebyshev (Mean, Sd) UCL					4.018						
85												
86	Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.											
87	Recommendations are based upon data size, data distribution, and skewness.											
88	These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).											
89	However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.											
90
